

INSTALLATION, OPERATION AND SERVICE MANUAL

HAHU-VP-EC

HORIZONTAL MINI AIR HANDLING UNIT

INVESTING IN QUALITY, RELIABILITY & PERFORMANCE

ISO 9001 QUALITY

Management Service

Every product is manufactured to meet the stringent requirements of the internationally recognized ISO 9001 standard for quality assurance in design, development and production.

World Leading Design and Technology

Equipped with the latest air-conditioning test rooms and manufacturing technology, we produce over 50,000 fan coil units each year, all conforming to the highest international standards of quality and safety.

CE SAFETY STANDARDS

Product Service

All products conform to the Certificate Europe directives (Machinery Safety, Electromagnetic Compatibility and Low Voltage), as required throughout the European Community, to guarantee correct safety standards.

The Highest Standards of Manufacturing

In order to guarantee the very highest standards and performance, we manage every stage in the manufacturing of our products. Throughout the production process, we maintain strict control, starting with our extensive resources in research and development through to the design and manufacture of almost every individual component, from moulded plastics to the assembly of units and controllers.

WEEE MARK

All products conform to the “WEEE” directive to guarantee correct standards of environmental solutions.

Quality Controlled from Start to Finish

Our highly trained staff and strict quality control methods enable us to produce products with an exceptional reputation for reliability and efficiency, maintained over many years. As well as CE certification and ISO 9001, several products ranges have UL / ETL safety approval in the USA and Canada, Eurovent performance and sound certification, and ROHS compliance for Europe, giving you the confidence to know our company is the right choice when selecting fan coil units.

ALWAYS MAKE SURE THIS MANUAL REMAINS WITH THE UNIT. READ THIS MANUAL BEFORE PERFORMING ANY OPERATION ON THE UNIT.

A. Technical Data

A.1. General Description

HAHU unit is an ideal air handling terminal unit for suspended ceiling installation and suitable for ducted air distribution. It is constructed of sandwich panels to achieve low noise level during operation. HAHU air handling unit is shipped completely assembled and motor wiring is introduced into the control box to reduce on-site installation time and manpower. Every unit is thoroughly inspected and tested to clear up potential problems during startup. The unit contains side panels that provide easy access to fans, motors and filters.

FRAMEWORK

A frameless structure is used. The panel is integrated folding steel structure and tested to ensure that there is no air leakage.

CASING

Casing is double skinned and basically consists of two panels with internal insulation. Each panel is 1" thick. The inner and outer panels are made of plane galvanized steel and pre-coated galvanized steel. The insulation consists of a high-pressure PU foam sandwiched in between to reinforce the panel.

FILTER

Filter is washable, double-layer acrylic nylon with aluminum frame. G4 (Merv 8) or F8 (Merv 14) filter is optional.

COIL

Coils are standard Cu/Al 3/8" OD provided with manual Air-Vent valves. The manifolds are made of steel with threaded connections. The aluminum fins are pre-coated for protection by hydrophilic blue fin process. Coils are tested at 35 bar and recommended maximum operation at 20 bar.

DRAIN PAN

Drain pan is made of single wall painting steel with 3/16" insulation on outer wall. The drain pan extends the full length and width of the coil and is sloped for positive drainage and includes 3/4" male pipe threaded galvanized drain connector.

FAN SECTION

Fans are mainly constructed of housing, impeller, mounting feet, and DC motor. The housing is made of hot-dip galvanized steel. The side panel includes inlet cones whose inlet conditions are designed for optimum aerodynamics. The scroll is fixed on the side panel by spot welding. The wheel is made of hot-dip galvanized steel. The forward curved blades feature an advanced aerodynamic design for maximum efficiency and minimum noise level. The impeller is fixed on the center plate and on the end ring with riveting compression. The impeller is designed for maximum strength and can withstand continuous operation with maximum power. All impellers and motor are fully balanced according to ANSI/AMCA-204 standard. The mounting feet are made of galvanized steel sheet with unique technical to ensure adequate strength. HAHU fans are equipped with YZWWSL external rotor BLDC motor. The motor consists of motor body and BLDC driver, controlled by 0~10VDC or Modbus RS485. This new designed motor significantly reduces motor torque fluctuation, vibration and noise resulting in high efficiency, reliability and long-life operation.

CONTROL SYSTEMS

1. Intelligent control (I type)

Intelligent control board is controlled via Infra-red handset and/or Intelligent wired wall pad, is field programmable and easy to be configured through the wired wall pad or open Modbus protocol with VVW and VAV control logics, provides variable speed indoor fan control, integrates with Intelligent modulating valves to allow Auto Dynamic Balancing and Intelligent Constant Delta T management systems. It controls 2-pipe, 2-pipe with electric heater, 2-pipe with 6-way valve and 4-pipe systems.

2. Flexible control (W type)

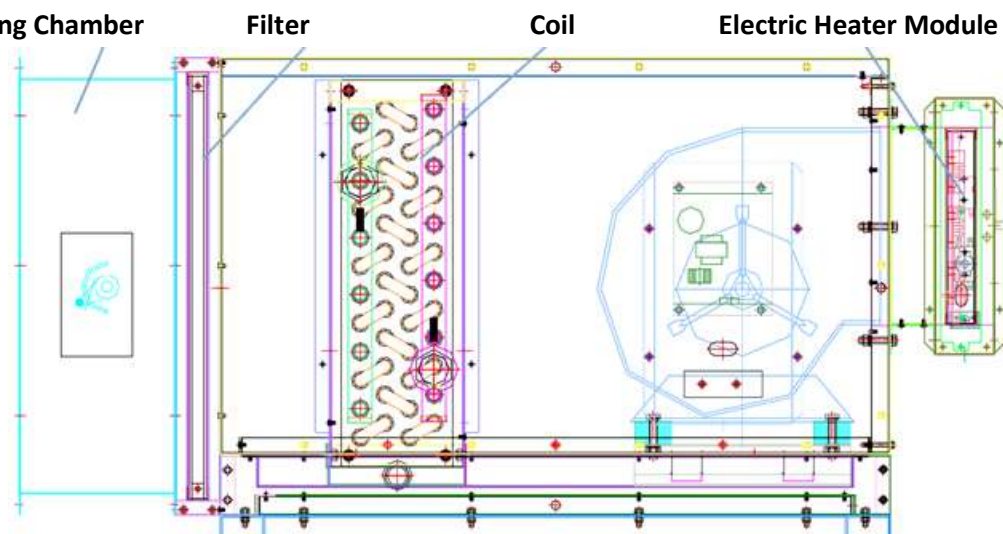

This control options features flexible functionality for external thermostat applications, allowing the independent control of drain pumps (if equipped), offering zone control operations, and limited diagnostics. In products where louvers are required, this control allows the stepping motors to open the louver at maximum position or close them when power of the unit is OFF.

ACCESSORIES

Optional accessories can be selected: G4 (Merv 8) or F8 (Merv 14) filter module, Mixing and recirculating chamber, 0~10V Modulating 2-way valve kit, On/Off valve kit, Electrical heating module, thermostat, AQI control PCB-S5, Complete function PCB-S6, Wired wall pad, Differential pressure transducer.

Mixing &

Recirculating Chamber

B. Installation

B.1. Safety Precautions

- When installing, performing maintenance or servicing Polar Air fan coil units observe the precautions stated in this manual as well as those stated on the labels attached to the unit.
- Ensure all local and national safety codes, laws, regulations, as well as general electrical and mechanical safety guidelines are followed for installation, maintenance and service.
- The appliance is for indoor use only.
- Ensure the correct power supply is provided.
- If the power supply cord is damaged, it must be replaced by qualified personnel.
- Installing and servicing fan coil unit should be performed by qualified service personnel only.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or persons lacking in experience and knowledge of the appliance, unless they have been given supervision or instruction concerning it.
- User of this appliance is responsible for his/her own safety.
- Warranty shall be voided if installation instructions and safety precaution stated in this manual are not observed.
- Never cut off the mains supply when unit is under operation. The unit should only be switched off by using the ON-OFF button on the control interface.
- During connections, select pipe pliers according to pipe diameter to avoid damaging units over forced.
- Untreated frozen water and cooling water may cause dirt accumulation and corrosion. Suggest using treated water. Suggested working water pressure is below 1.6 Mpa.
- When units are in cooling mode, suggested freezing water degree is $\geq 7^{\circ}\text{C}$; When units are in heating mode, suggested hot water degree is $\leq 60^{\circ}\text{C}$.
- Condensate water pipe, water connection pipe, water connectors and solenoid valve body must remain heat to avoid condensation.

CAUTIONS

Before any service or maintenance operations turn off the mains electrical supply.

DO NOT turn OFF the main power supply when the unit is operating. Turn off the unit BEFORE turning off the main power

B.2. Location

Before installing and running the unit, please check the following:

1. There must be enough space for unit installation and maintenance. Please refer to below figure for the unit's outlines and dimensions and for the minimum distance between the unit and the obstacle/ any obstructions/ its surroundings.
2. Please ensure there is enough space for piping connections and electrical wiring.
3. Check whether the hanging rods can support the weight of the unit (see specification table for weight of the unit).
4. The unit must be installed horizontally to ensure proper operation and condensate draining.
5. The external static pressure of the ducting must be within the unit's static pressure range.
6. Confirm that the unit has been switched OFF before installing or servicing the unit.

B.3. Installation Procedures

1. The unit is designed to be installed in a concealed ceiling. Installation and maintenance should be performed by qualified personnel who are familiar with local codes and regulations, and are experienced with this type of appliance.
2. Please refer to the pictures below for installation procedure.

Tie rod
Nut
Washer
Vibration damper

CAUTIONS

Make sure the top of the unit is level after installation. The drain pan is designed with a slight gradient to facilitate drainage.

CAUTIONS

Dimension M and N are determined by air duct design.

Air duct should be fire-proof. Please refer to concerned country national and local regulation.

Circulatory air pressure drop should be approximately equal to the External Static Pressure.

B.4. Insulation

1. Confirm the Chilled water pipes and all parts on the pipes should be insulated.
2. Confirm insulation is installed on the supply air duct.

B.5. Service Connection

1. Confirm duct connections are sealed.
2. Confirm water piping INLET is at the BOTTOM, water OUTLET is at the TOP.
3. Confirm no water leakage is observed at the piping and condensate drain connections.
4. Confirm drain pipe slope is minimum 1:50.

CAUTIONS

When connecting pipe to fan coil unit, do not bend or reposition the coil header for alignment purposes. This could cause a tubing fracture resulting in a water leak when water pressure is applied to the system.

B.6. Unit Operation

1. Confirm air has been properly bled from and there is waterflow through the coil.
2. Confirm fan wheel is rotating and air is discharged at unit supply opening.
3. Confirm power voltage between Terminals L1 and N.
4. Confirm thermostat voltage (24V or 12V).
5. Verify desired fan speed is receiving power from the thermostat.
6. Check functionality of motor with a call for heating or cooling.
7. Confirm system ESP is per schedule.
8. Confirm control valve(s) functionality.

C. Maintenance

C.1. General Maintenance

1. Installation and maintenance should be performed by qualified personnel who are familiar with local codes and regulations, and are also experienced with this type of appliance.
2. Confirm that the unit has been switched OFF before installing or servicing the unit.
3. A good general maintenance plan will prevent damage to and unexpected shutting down of the equipment.
4. Dirty filters reduce air flow as well as unit performance. Therefore, changing or cleaning the filters is important. Check the cleanliness of the filter and replace or clean as required monthly.
5. Coils should be cleaned with compressed air or water to remove dust, dirt or lint. They can be brushed with a soft brush or vacuumed with a vacuum cleaner.
6. If the water coil is not being used during the winter season it should be drained, or an anti-freezing solution should be added to the water circuit to avoid freezing.

C.2. Regular Maintenance

1. Inspect and clean the condensate drain pan to avoid any clogging of the drain by dirt, dust, etc. Inspect drainage piping to ensure the proper condensate flow.
2. Check and clean the coil. Clean the coils with a low-pressure water jet or low-pressure air.
3. Clean and tighten all the wiring connections.
4. Drain out the water system and check for buildup of mineral deposits.

C.3. Filter Cleaning

1. Remove the filter from the bottom
2. Clean the filter with a brush, or with water jet.
3. Reinstall the filter by sliding it back into the groove.

C.4. Fan Motor Replacement

1. Remove the screws from the bottom panel.
2. Remove the fixing nuts of the fan blower.
3. Replace the fan
4. Reinstall the bottom panel with screws.

D. Control Specifications: Intelligent Control (I Type)

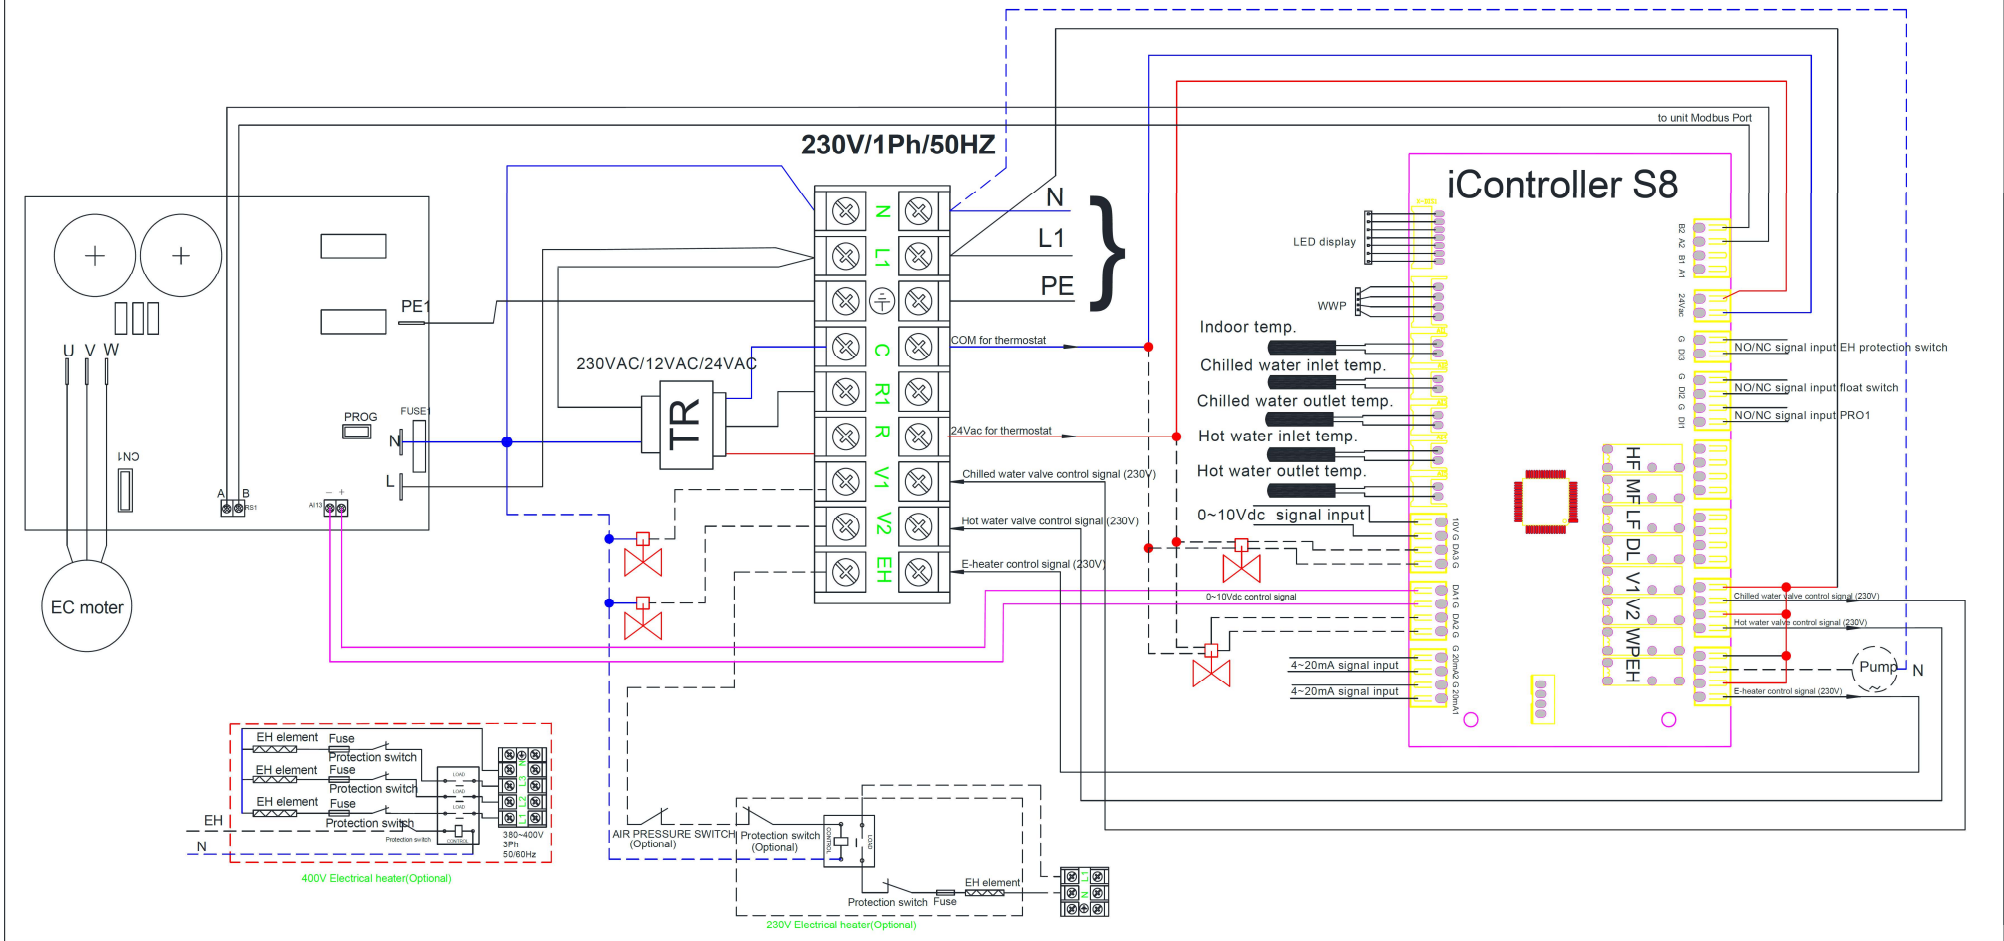

D.1. I/O Port Definitions for I type

I/O		Code	2-Pipe	4-Pipe
Analogue Input	Air Temperature Sensor	AL0	Room air temperature sensor (Tr)	
	Chilled water inlet sensor (Ti1)	AI1	Water inlet temperature sensor (Ti1)	Chilled water inlet temperature sensor (Ti1)
	Chilled water outlet sensor (Ti2)	AI2	Water outlet temperature sensor(Ti2)	Chilled water outlet temperature sensor(Ti2)
	Hot water inlet sensor (Ti3)	AI3	Air inlet temperature sensor (Ti3)	Hot water inlet temperature sensor (Ti3)
	Hot water outlet sensor (Ti4)	AI4	Air outlet temperature sensor (Ti4)	Hot water outlet temperature sensor (Ti4)
	Transducer signal input	0-10VDC	0-10VDC signal input	
		4-20mA1	4-20mA signal input1	
		4-20mA2	4-20mA signal input2	
User interface	IR receiver	X-DIS 1	Digital communication port to LED / IR receiver board.	
	Wired wall pad	TTL1	Digital communication port to Wired wall pad board.	
Digital input	Occupancy contact	PRO1	The unit is ON. When occupancy contact is closed for 60s, the unit is turned OFF. When occupancy contact is open for 10s, the unit is turned ON.	
	Float switch	Float	NC signal for condensate water float switch.	
	EH protection	EH	NC signal for EH protection switch.	
Power supply	Working power supply	L	240VAC or 24VDC	
	GND	GND	Grounding	
Digital input	High speed	HF	High speed: Free of voltage contact	
	Medium speed	MF	Medium speed: Free of voltage contact	
	Low speed	LF	Low speed: Free of voltage contact	
	Motorized valve 1	MTV1	ON/OFF motorizes valve	Chilled water valve
	Motorized valve 2	MTV2	Reserved	Hot water valve
	Condensate water pump	WP	Condensate water pump: Free of voltage contact	
	Electrical heater	EH	EH: Free of voltage contact	
	BUS port	A1/B1	Communication with EC fan driver	
	BUS port	A/B	Modbus network serial connection	
	EC fan control signal	DA1	EC fan control signal 0-10VDC	
	Modulating valve 1	DA2	Modulating valve	Chilled water modulating valve
	Modulating valve 2	DA3	Modulating EH control signal	Hot water modulating valve

D.3. Control Logics for I Control

D.3.1. Control Logics for I Control For EC-S8 (300029=2)

2-pipe with modulating valve for EC-S8 (300046=0)

COOL MODE

1) If $T_r \geq T_s + 1^\circ\text{C}$, then cool operation is activated, MTV1 is turned on. Indoor fan runs at set speed. DA2 is open at 10Vdc for 2 min. Then check Ti1,

MS300080=0,

When $T_{i1} \leq 8^\circ\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

When $8 < T_{i1} \leq 10^\circ\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 1 PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

When $10 < T_{i1} \leq 12^\circ\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 2 PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

When $12 < T_{i1} \leq 15^\circ\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 3 PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

When $15 < T_{i1} \leq 28^\circ\text{C}$ (Modbus 300017 setting), DA2 output is kept at 10Vdc;

When $T_{i1} > 28^\circ\text{C}$ (Modbus 300017 setting), DA2 output is at minimum (Modbus300016 setting); and report pre-heat alarm

MS300080=1,

DA2 output is based on cooling water flow reading and setting PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

MS300080=2,

DA2 output is based on cooling pressure difference setting (MS300084) and 4-20mA input2 reading (MS400007) PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

2) If $T_r < T_s - 1^\circ\text{C}$, then cool operation is terminated and MTV1 is turned off. DA2 is 0VDC. Indoor fan runs at set speed.

3) The range of T_s is 16 - 30 °C or fixed according to Parameter 4 setting.

4) Indoor fan speed can be adjusted for low, medium, high and auto.

LOW TEMPERATURE PROTECTION OF INDOOR COIL

a) If $T_{i1} \leq 2^\circ\text{C}$ for 2 minutes, then MTV1 is turned off; DA2=0VDC; If indoor fan is set for low speed, then it will run at medium speed. If it is set at medium or high speed, then it will keep running at the same speed.

b) If $T_{i1} \geq 5^\circ\text{C}$ for 2 minutes, then MTV1 is turned on. DA2 is calculated by delta T; Indoor fan runs at set speed.

FAN MODE

a) Indoor fan runs at the set speed while heater, MTV1, MTV2 are turned off.

b) Indoor fan speed can be adjusted to low, medium and high.

HEAT MODE

Heat mode without electrical heater (300047=0)

a) If $T_r \leq T_s - 1^\circ\text{C}$, then heat operation is activated and MTV1 and MTV2 are turned on.

DA2 is open at 10Vdc for 2 min. Then check Ti1,

MS300080=0,

If $T_{i1} \leq 28^\circ\text{C}$ (300017 setting), fan is turned on at low speed; DA2 is on at 10VDC;

If 28°C (300017 setting) < T_{i1} < 28°C (3000017 setting) + 4°C , fan and DA2 are kept original state;
 If $T_{i1} \geq 28^{\circ}\text{C}$ (3000017 setting) + 4°C , fan runs at set speed. DA2 output is from minimum setting(300016setting) - 10Vdc based on Delta T_i and setting; if T_i sensor is damaged, Fan runs at set speed.

MS300080=1,

DA2 output is based on heating water flow reading and setting PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

MS300080=2,

DA2 output is based on heating pressure difference setting (MS300085) and 4-20mA input2 reading (MS400007) PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

- b) If $T_r > T_s + 1^{\circ}\text{C}$, then heat operation is terminated and MTV1 is turned off. DA2 is 0VDC. Indoor fan is turned OFF.
- c) The range of T_s is 16 - 30°C or fixed according to Parameter 4 setting.
- d) Indoor fan speed can be adjusted to low, medium, high and auto.

Heat mode with electrical heater as booster(300047=1)

a) If $T_r \leq T_s - 1^{\circ}\text{C}$, then heat operation is activated and MTV1 and MTV2 are turned on. Indoor fan runs at the set speed. DA3 output is from minimum setting(300016setting) - 10Vdc based on Delta T_3/T_4 and setting; DA2 is open at 10VDC for 2 min. Then check T_{i1} ;

MS300080=0,

If $T_{i1} \leq 28^{\circ}\text{C}$ (300017 setting), EH is closed; DA2 output is 10Vdc; DA3 output is from 0 - 10Vdc based on Delta T_{i3}/T_{i4} and setting;

If 28°C (300017 setting) < $T_{i1} \leq 28^{\circ}\text{C}$ (300017 setting) + 4°C , EH and DA2 output are kept original state;

If $T_{i1} > 28^{\circ}\text{C}$ (300017 setting) + 4°C , EH is opened; DA3 is 0Vdc; DA2 output is from minimum setting(300016setting) - 10Vdc based on Delta T_{i1}/T_{i2} and setting;

MS300080=1

DA2 output is based on heating water flow reading and setting PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

If $T_{i1} \leq 28^{\circ}\text{C}$ (300017 setting), EH is closed;

If 28°C (300017 setting) < $T_{i1} \leq 28^{\circ}\text{C}$ (300017 setting) + 4°C , EH is kept original state;

If $T_{i1} > 28^{\circ}\text{C}$ (300017 setting) + 4°C , EH is opened;

MS300080=2

DA2 output is based on heating pressure difference setting (MS300085) and 4-20mA input2 reading (MS400007) PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

If $T_{i1} \leq 28^{\circ}\text{C}$ (300017 setting), EH is closed;

If 28°C (300017 setting) < $T_{i1} \leq 28^{\circ}\text{C}$ (300017 setting) + 4°C , EH is kept original state;

If $T_{i1} > 28^{\circ}\text{C}$ (300017 setting) + 4°C , EH is opened;

- b) If $T_r > T_s + 1^{\circ}\text{C}$, then heat operation is terminated and MTV1 and MTV2 are turned off. DA2 is 0VDC. Indoor fan runs at auto speed;
- c) The range of T_s is 16 - 30°C or fixed according to Parameter 4 setting;
- d) Indoor fan speed can be adjusted for low, medium, high and auto.

Heat mode with electrical heater as primary heat source (300047=2)

a) If $T_{i2} \leq 35^{\circ}\text{C}$ (or T_{i2} is damaged or disconnected), and if $T_r \leq T_s - 1^{\circ}\text{C}$ (or -4°C if economy contact is closed), heat operation is

activated, Indoor fan runs at set speed. EH is turned on. DA3 output is from minimum setting(300016setting) - 10Vdc based on Delta T3 /T4 and setting;

- b) If $T_r > T_s + 1\text{ }^{\circ}\text{C}$ then heat operation is terminated, Electrical heater is OFF. Indoor fan is turn OFF after 120S.
- c) The range of T_s is 16-30 $^{\circ}\text{C}$ or fixed according to Parameter 4 setting.
- d) Indoor fan speed can be adjusted for low, medium, high and auto.

OVER-HEAT PROTECTION OF INDOOR COIL IN HEAT MODE

- a) If $T_{i1} \geq 75\text{ }^{\circ}\text{C}$, then MTV1, DA2, MTV2 and EH are turned off, indoor fan runs at high speed, even in standby mode.
 - b) If $T_{i1} < 70\text{ }^{\circ}\text{C}$, then unit will maintain its original state.
- If T_{i1} temperature sensor is damaged, the protection mode will be override.

DEHUMIDIFICATION MODE

- a) $T_s = 24^{\circ}\text{C}$;
- b) If $T_r \geq 25^{\circ}\text{C}$ for 30S, then MTV1 will be ON for 3 minutes, and then OFF for 4 minutes. DA2 is turned on 3times of minimum opening. Fan is running at auto speed.
- c) If $16^{\circ}\text{C} \leq T_r < 25^{\circ}\text{C}$, then MTV1 will be ON for 3 minutes, and then OFF for 6 minutes. DA2 is turned on 2 times of minimum opening. Fan is running at auto speed.
- d) If $T_r < 16^{\circ}\text{C}$, then MTV1 will be turned ON for 4 minutes and then OFF for 10 minutes. DA2 is turned on minimum opening. Fan is running at auto speed.

AUTOMODE

Fan is turned on at medium speed. Check T_r and T_s in 30S;

if $T_s > T_r + 3^{\circ}\text{C}$ for 30S, the unit is turned on in heat mode;

if $T_r - 3\text{ }^{\circ}\text{C} < T_s < T_r + 3\text{ }^{\circ}\text{C}$ for 30S, the unit is turned on in fan mode;

If $T_s < T_r - 3\text{ }^{\circ}\text{C}$, , the unit is turned on in cool mode;

If the unit working mode is confirmed, it cannot change. After unit is turned OFF for 2 hours, then working mode is reset again.

4-pipe with modulating valve for EC-S8 (300046=1)

COOL MODE

- 1) If $T_r \geq T_s + 1\text{ }^{\circ}\text{C}$, then cool operation is activated, MTV1 is turned on. Indoor fan runs at set speed.
- DA2 is open at 10Vdc for 2 min. Then check T_{i1} ,

MS300080=0,

When $T_{i1} \leq 8^{\circ}\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

When $8 < T_{i1} \leq 10^{\circ}\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 1 PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

When $10 < T_{i1} \leq 12^{\circ}\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 2 PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

When $12 < T_{i1} \leq 15^{\circ}\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 3 PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

When $15 < T_{i1} \leq 28^{\circ}\text{C}$ (Modbus 300017 setting), DA2 output is kept at 10Vdc;

When $T_{i1} > 28^{\circ}\text{C}$ (Modbus 300017 setting), DA2 output is at minimum (Modbus300016 setting); and report pre-heat alarm;

MS300080=1

DA2 output is based on cooling water flow reading and setting PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

MS300080=2

DA2 output is based on cooling pressure difference setting (MS300084) and 4-20mA input2 reading (MS400007) PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

- 2) If $T_r < T_s - 1^{\circ}\text{C}$, then cool operation is terminated and MTV1 and AUX1 are turned off. DA2 is 0VDC. Indoor fan runs at set

speed.

3) The range of T_s is 16 - 30 °C.

4) Indoor fan speed can be adjusted for low, medium, high and auto.

LOW TEMPERATURE PROTECTION OF INDOOR COIL

a) If $T_{i1} \leq 2$ °C for 2 minutes, then MTV1 is turned off. DA2=0VDC. If indoor fan is set for low speed, then it will run at medium speed. If it is set at medium or high speed, then it will keep running at the same speed.

a) If $T_{i1} \geq 5$ °C for 2 minutes, then MTV1 is turned on. DA2 is calculated by delta T. Indoor fan runs at set speed.

FAN MODE

a) Indoor fan runs at the set speed while heater, MTV1, MTV2, AUX1 and AUX1 are turned off.

b) Indoor fan speed can be adjusted to low, medium and high.

HEAT MODE

Heat mode without electrical heater (300047=0)

a) If $T_r \leq T_s - 1$ °C, then heat operation is activated and MTV2 is turned on.

DA3 is open at 10Vdc for 2 min. Then check T_{i3} ,

MS300080=0,

If $T_{i3} \leq 28$ °C (300017 setting), fan is turned on at low speed; DA3 is on at 10VDC;

If 28 °C (300017 setting) $< T_{i3} < 28$ (3000017 setting) + 4 °C, fan and DA3 are kept original state;

If $T_{i3} \geq 28$ (3000017 setting) + 4 °C, fan runs at set speed. DA3 output is from minimum setting (300016 setting) - 10Vdc based on Delta T_3 and T_4 and setting; if T_{i1} sensor is damaged, Fan runs at set speed.

MS300080=1

DA3 output is based on heating water flow reading and setting PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

MS300080=2

DA3 output is based on heating pressure difference setting (MS300085) and 4-20mA input 3 reading (MS400008) PID calculation. The output is minimum output (Modbus300015 setting)-10VDC;

b) If $T_r > T_s + 1$ °C then heat operation is terminated and MTV2 is turned off. DA3 is 0VDC. Indoor fan is turned on low speed;

c) The range of T_s is 16 - 30 °C.

d) Indoor fan speed can be adjusted to low, medium, high and auto.

OVER-HEAT PROTECTION OF INDOOR COIL IN HEAT MODE

a) If $T_{i3} \geq 75$ °C, then MTV2, DA3, AUX2 and EH are turned off, indoor fan runs at high speed, even in standby mode.

b) If $T_{i3} < 70$ °C, then unit will maintain its original state.

c) If T_{i3} temperature sensor is damaged, the protection mode will be overridden

DEHUMIDIFICATION MODE

a) $T_s = 24$ °C;

b) If $T_r \geq 25$ °C for 30S, then MTV1 will be ON for 3 minutes, and then OFF for 4 minutes. DA2 is turned on 3 times of minimum opening. Fan is running at auto speed.

c) If 16 °C $\leq T_r < 25$ °C, then MTV1 will be ON for 3 minutes, and then OFF for 6 minutes. DA2 is turned on 2 times of minimum opening. Fan is running at auto speed.

d) If $T_r < 16$ °C, then MTV1 will be turned ON for 4 minutes and then OFF for 10 minutes. DA2 is turned on minimum opening. Fan is running at auto speed.

AUTOMODE

Fan is turned on at medium speed. Check T_r and T_s in 30S;

if $T_s > T_r + 3$ °C for 30S, the unit is turned on in heat mode;

if $T_r - 3$ °C $< T_s < T_r + 3$ °C for 30S, the unit is turned on in fan mode;

If $T_s < T_r - 3$ °C, , the unit is turned on in cool mode;

If unit is working at heat mode or Fan mode, if $T_r - T_s > 3.0$ °C, MTV2, MTV1 and DA3 are OFF more than 3 minutes, working mode will be changed to cooling mode;

If unit is working at cool mode or Fan mode, if $T_s - T_r > 3.0^\circ\text{C}$, MTV2, MTV1 and DA2 are OFF more than 3 minutes, working mode will be changed to heating mode;

2-pipe with 6-way valve unit for EC-S8 (300046=2)

COOL MODE

1) If $T_r \geq T_s + 1^\circ\text{C}$, then cool operation is activated, MTV1 is turned on. Indoor fan runs at set speed.

DA2 is open at 0Vdc for 2 min. Then check Ti1,

MS300080=0,

When $T_{i1} \leq 8^\circ\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting PID calculation. The output is 4-0Vdc;

When $8 < T_{i1} \leq 10^\circ\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 1 PID calculation. The output is 4-0Vdc;

When $10 < T_{i1} \leq 12^\circ\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 2 PID calculation. The output is 4-0Vdc;

When $12 < T_{i1} \leq 15^\circ\text{C}$, DA2 output is based on water temperature difference (T_{i1}/T_{i2}) and Modbus parameter 300027 setting minus 3 PID calculation. The output is 4-0Vdc;

When $15 < T_{i1} \leq 28^\circ\text{C}$ (Modbus 300017 setting), DA2 output is kept at 0Vdc;

When $T_{i1} > 28^\circ\text{C}$ (Modbus 300017 setting), DA2 output is 4Vdc; and report pre-heat alarm;

MS300080=1

DA2 output is based on cooling water flow reading and setting PID calculation. The output is minimum output The output is 4-0Vdc;

MS300080=2

DA2 output is based on cooling pressure difference setting (MS300084) and 4-20mA input2 reading (MS400007) PID calculation. The output is 4-0Vdc.

2) If $T_r < T_s - 1^\circ\text{C}$, then cool operation is terminated and MTV1 is turned off. DA2 is 5VDC. Indoor fan runs at set speed.

3) The range of T_s is 16 - 30 $^\circ\text{C}$.

4) Indoor fan speed can be adjusted for low, medium, high and auto.

LOW TEMPERATURE PROTECTION OF INDOOR COIL

a) If $T_{i1} \leq 2^\circ\text{C}$ for 2 minutes, then MTV1 is turned off. DA2=5VDC; If indoor fan is set for low speed, then it will run at medium speed. If it is set at medium or high speed, then it will keep running at the same speed.

b) If $T_{i1} \geq 5^\circ\text{C}$ for 2 minutes, then MTV1 is turned on. DA2 is calculated by Delta T; Indoor fan runs at set speed.

FAN MODE

a. Indoor fan runs at the set speed while heater, MTV1, MTV2 are turned off.

b. Indoor fan speed can be adjusted to low, medium and high.

HEAT MODE

Heat mode without electrical heater (300047=0)

b) If $T_r \leq T_s - 1^\circ\text{C}$, then heat operation is activated and MTV2 is turned on. DA2 is open at 10Vdc for 2 min. Then check Ti1.

MS300080=0,

If $T_{i1} \leq 28^\circ\text{C}$ (300017 setting), fan is turned on at low speed; DA2 is on at 10VDC;

If 28°C (300017 setting) $< T_{i1} < 28^\circ\text{C}$ (3000017 setting) $+ 4^\circ\text{C}$, fan and DA2 are kept original state;

If $T_{i1} \geq 28^\circ\text{C}$ (3000017 setting) $+ 4^\circ\text{C}$, fan runs at set speed. DA2 output is from 6 - 10Vdc based on Delta T_{i1}/T_{i2} and setting; if Ti sensor is damaged, Fan runs at set speed.

MS300080=1

DA2 output is based on heating water flow reading and setting PID calculation. The output is from 6-10Vdc;

MS300080=2

DA2 output is based on heating pressure difference setting (MS300085) and 4-20mA input2 reading (MS400007) PID calculation. The output is from 6-10Vdc;

b) If $T_r > T_s + 1^\circ\text{C}$, then heat operation is terminated and MTV1 is turned off. DA2 is 5VDC. Indoor fan is turned OFF.

- c) The range of T_s is 16 - 30°C.
- d) Indoor fan speed can be adjusted to low, medium, high and auto.

DEHUMIDIFICATION MODE

- a) MTV1 is turned on; $T_s=24^\circ\text{C}$;
- b) If $T_r \geq 25^\circ\text{C}$ for 30S, DA2 is 1.5Vdc. Fan is running at auto speed.
- c) If $16^\circ\text{C} \leq T_r < 25^\circ\text{C}$, DA2 is 2.5Vdc. Fan is running at auto speed.
- d) If $T_r < 16^\circ\text{C}$, DA2 is 3.5Vdc. Fan is running at auto speed.

AUTOMODE

Fan is turned on at medium speed. Check T_r and T_s in 30S;

if $T_s > T_r + 3^\circ\text{C}$ for 30S, the unit is turned on in heat mode;

if $T_r - 3^\circ\text{C} < T_s < T_r + 3^\circ\text{C}$ for 30S, the unit is turned on in fan mode;

If $T_s < T_r - 3^\circ\text{C}$, the unit is turned on in cool mode;

If the unit working mode is confirmed, it cannot change.

FOR 2-PIPE AND 4-PIPE SYSTEMS

PRO (N/O signal input)

When Modbus 100004=0;

The unit is on:

PRO input is closed for 60S, the unit is turned off.

PRO input is open for 60S, the unit is turned on.

When Modbus 100004=1;

1) The unit is on or standby, PRO input is open or closed, the unit is kept original state;

2) The unit is off,

PRO input is closed for 30S, MTV1 is turned on, DA2 is open at double of minimum setting (Modbus 300027 setting), Fan is turn on at low speed;

PRO input is opened for 30S, MTV1 is off, DA2 is 0Vdv, Fan is turn off.

3) In period of PRO closed time, if unit receives instruction from remote handset, wired wall pad or Modbus, the unit will work according to the instruction at once.

SLEEP MODE

SLEEP mode can only be set when the unit is in COOL or HEAT mode.

In COOL mode, after SLEEP mode is set, the indoor fan will run at auto speed and T_s will increase by 0.5 °C for every 30mins.

In HEAT mode, after SLEEP mode is set, the indoor fan will run at auto speed and T_s will decrease by 0.5 °C for every 30 minutes.

Sleep mode is turned off, the setting temperature resumes and Fan is changed to setting speed.

DA1 0-10vdc control signals

DA1 output is set by 300022 when fan is set at high speed

DA1 output is set by 300021 when fan is set at medium speed;

DA1 output is set by 300020 when fan is set at low speed;

When fan is set auto mode, if 300048=0, DA1 output is calculated by T_r/T_s PID calculation. If 300048=1, DA1 output is calculated by ESP PID calculation.

DRAIN PUMP (IF INSTALLED)

In cooling mode, if MTV1 is turned ON, WP is turned ON. If MTV1 is turned OFF or unit working mode is changed, WP will be turned OFF after 5 minutes.

If the system is turned off at the circuit breaker (or main power supply), the drain pump function is off.

FLOAT SWITCH (IF INSTALLED)

If the float switch (N/C) is opened before the unit is turned on and if running at COOL mode, then MTV1 is turned off. The drain pump will be turned on and indoor fan will keep running. After float switch is closed, MTV1 is turned on.

If the unit is turned on in COOL mode and the float switch is opened continuously ≥ 5 seconds, then the drain pump will be turned on and MTV1 will remain off. After the float switch is closed, the drain pump will run for an additional 5 minutes. If the float switch is opened for 10 minutes continuously, then MTV1 will remain off and the indoor fan runs at set speed and the system will report an error signal.

If the unit is off and the float switch is opened, then the drain pump will be turned on. After the float switch is closed, the drain pump will run for an additional 5 minutes. If the float switch is opened for 10 minutes continuously, then the system will report an error signal.

EH PROTECTION SWITCH

1. If EH protection switch is closed for 30s and Fan is ON, then EH is ON.
2. When EH is ON, EH protection is open for 1s, or Fan is OFF, EH will be turned OFF at once and report alarm.
3. When EH protection switch is closed for 180s, EH will be turned ON again.
4. If EH protection switch is opened 3 times in 1 hour, EH will not be turned ON again except main power reset.

LOW TEMPERATURE PROTECTION OF INDOOR COIL IN WINTER

This is frost protection when the unit is off to prevent water from freezing in the coil.

If a 2-pipe system is in Standby Mode, when $T_r \leq 2^\circ\text{C}$ for 2 minutes, MTV1 is turned on. AUX2 is on. DA2 is 5VDC. If $T_{i1} < 5^\circ\text{C}$ for 2 minutes, EH (if installed) is switched on. Indoor fan is turned on at low speed. If $T_r \geq 5^\circ\text{C}$ for 2 minutes, MTV2 is turned off. AUX2 is off. DA2 is 0VDC. EH (if installed) is turned off. Indoor fan is switched off.

If a 4-pipe system (or 2-pipe unit with 6-way valve) is in Standby Mode, when $T_r \leq 2^\circ\text{C}$ for 2 minutes, MTV2 is turned on. AUX2 is on. DA3 is 5VDC (DA2 is 8VDC if using 6-way valve). If $T_{i1} < 5^\circ\text{C}$ for 2 minutes EH (if installed) is switched on. Indoor fan is turned on at low speed. If $T_r \geq 5^\circ\text{C}$ for 2 minutes, MTV2 is turned off. AUX2 is off. DA3 is 0VDC (DA2 is 5VDC if using 6-way valve). EH (if installed) is turned off. Indoor fan is switched off.

D.4. Open Modbus Protocol

D.4.1. Open Modbus Protocol For EC-S8

Transfer Mode: RTU, BAUD Rate: 9600bps, 8 data bit, 1 stop bit, None parity bit

The communications require a delay of 80ms between reading an answer and sending the next command. All temperatures are equal to reading data*10 accuracy: 0.1 degree C.

Supported Functions:

Function Code	Function Description
01(01H)	Read Coils
02(02H)	Read Discrete Inputs
03(03H)	Read Holding Registers
04(04H)	Read Input Registers
05(05H)	Write Single Coil
06(06H)	Write Single Register
15(0FH)	Write Multiple Coils
16(10H)	Write Multiple Registers
255(FFH)	Extended Commands which are used to test unit

Valid Error code table:

Error code	Description	Definition
01 (01H)	Invalid commands	Received commands beyond valid commands
02 (02H)	Invalid data address	Data addresses beyond valid data address
03 (03H)	Invalid data	Data beyond definition range
04 (04H)	Write data not successful	Write data did not succeed

D.5. Modbus Network Setup for FCU group

Network Setup

1. Disconnect the communication plug from the control box

2. Communication plug
A, B, A, B is printed on the main PCB. When you connect the wires, please ensure connection of A to A and B to B.
3. Connection wire
 - 3.1. If the total length of wire is more than 1000m, please use shielded wire in order to protect the signal transmission.
 - 3.2. Complete wire connection

- 3.3. Wire connection check
 - 3.3.1. After the wire connection is completed, please check that the wire colours correspond.
 - 3.3.2. Check the wire contact by using a multimeter.

3.3.3. Check 1 and 2, 3 and 4, 5 and 6 to be sure connections are correct.

3.3.4. If the resistance between two wire contacts is too high, please check and reconnect the wire contacts.

4. Reconnect the communication plug to control box
5. Using wired wall pad or Modbus to set each unit address.

D.6. LED Display and Error Description: I-Type (optional)

LED receiver in ABS housing with 0.5m or 1.8m pre-wiring

Complete Function PCB – I Type Control		
Fan speed setting	LED Display	Condition
High speed	Red LED On	Normal
Medium speed	Yellow LED On	Normal
Low speed	Green LED On	Normal

For all units - Green LED			
Error Description	Blink	Reason	Remedy
Return air sensor failure	Green LED blinks 1 times, stops for 3s	Room sensor unplugged or damaged.	1. Check if Tr plug is connected or not. 2. Check if sensor's resistance is correct or not.
Indoor coil sensor 1 failure	Green LED blinks 2 times, stops for 3s	Ti1 sensor unplugged or damaged.	1. Check if Ti1 plug is connected or not. 2. Check if sensor's resistance is correct or not.
Indoor coil sensor 2 failure	Green LED blinks 3 times, stops for 3s	Ti2 sensor unplugged or damaged.	1. Check if Ti2 plug is connected or not. 2. Check if sensor's resistance is correct or not.
Water pump failure	Green LED blinks 4 times, stops for 3s	Float switch is opened.	1. Check if the condensate water pipe is connected or not. 2. Check if the pump is functioning or not.
Indoor coil low temperature protection	Green LED blinks 5 times, stops for 3s	Water temperature is lower than 3 °C.	Check the water temperature.
Indoor coil over-heat protection	Green LED blinks 6 times, stops for 3s	Water temperature is higher than 70 °C.	Check the water temperature
Filter Switch (S8 PCB)	Green LED blinks 7 times, stops for 3s	Filter switch is opened.	1. Check if filter block or not 2. replace the new filter
Electric Heater failure	Green LED blinks 8 times, stops for 3s	Only for unit with EH. EH safety switch is opened.	1. Change fan speed to high. 2. Replace the damaged EH safety switch.
EC motor failure (CN4)	Green LED blinks 9 times, stops 3s	No EC motor feedback	1. Check Modbus setting. 2. Check the EC motor.
EC motor failure (CN5)	Green LED blinks 10 times, stops 3s	No EC motor feedback	1. Check Modbus setting. 2. Check the EC motor.
Anti-frozen protection	Green LED blinks 12 times, stops for 3s	When unit is standby, Tr<2°C.	1. Turn on unit to keep Tr high than 5°C

E. Control Specifications: Flexible Function (W Type)

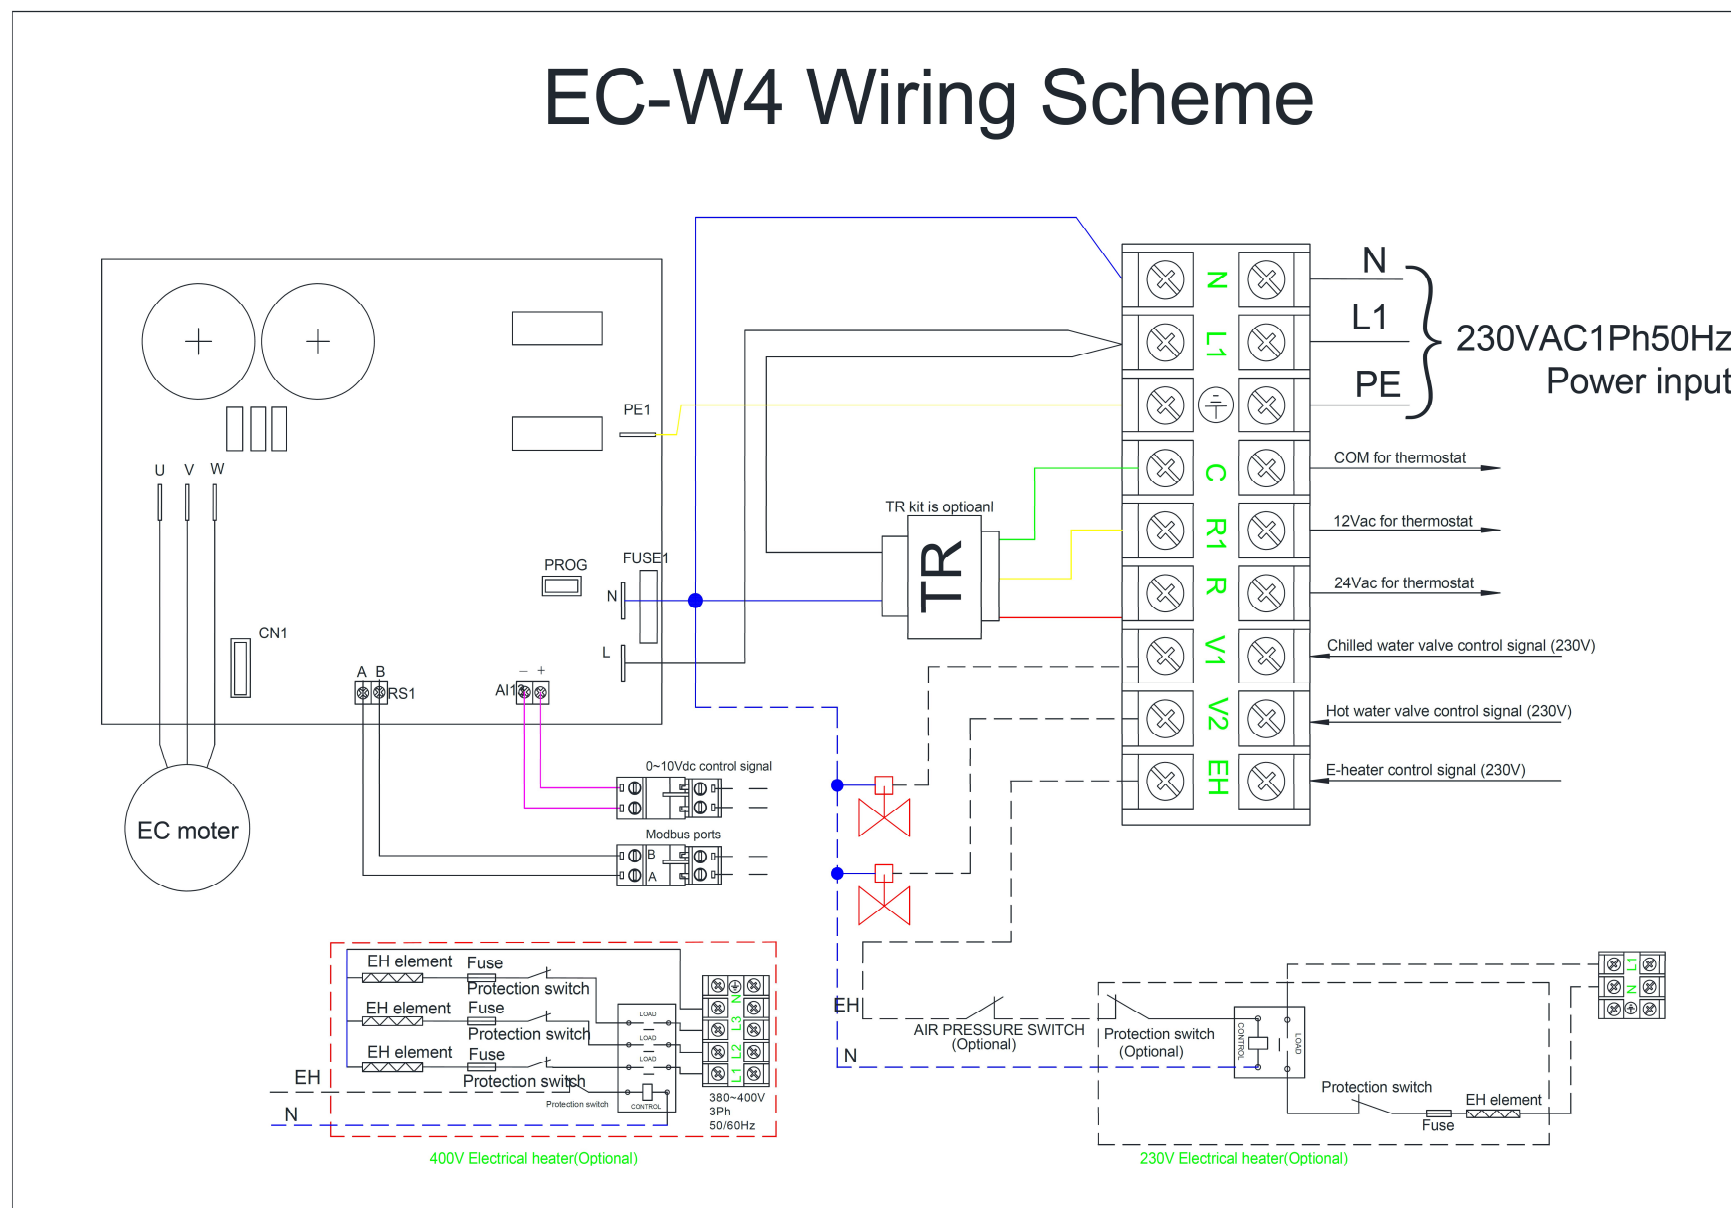

E.1. I/O Port Definitions for W type

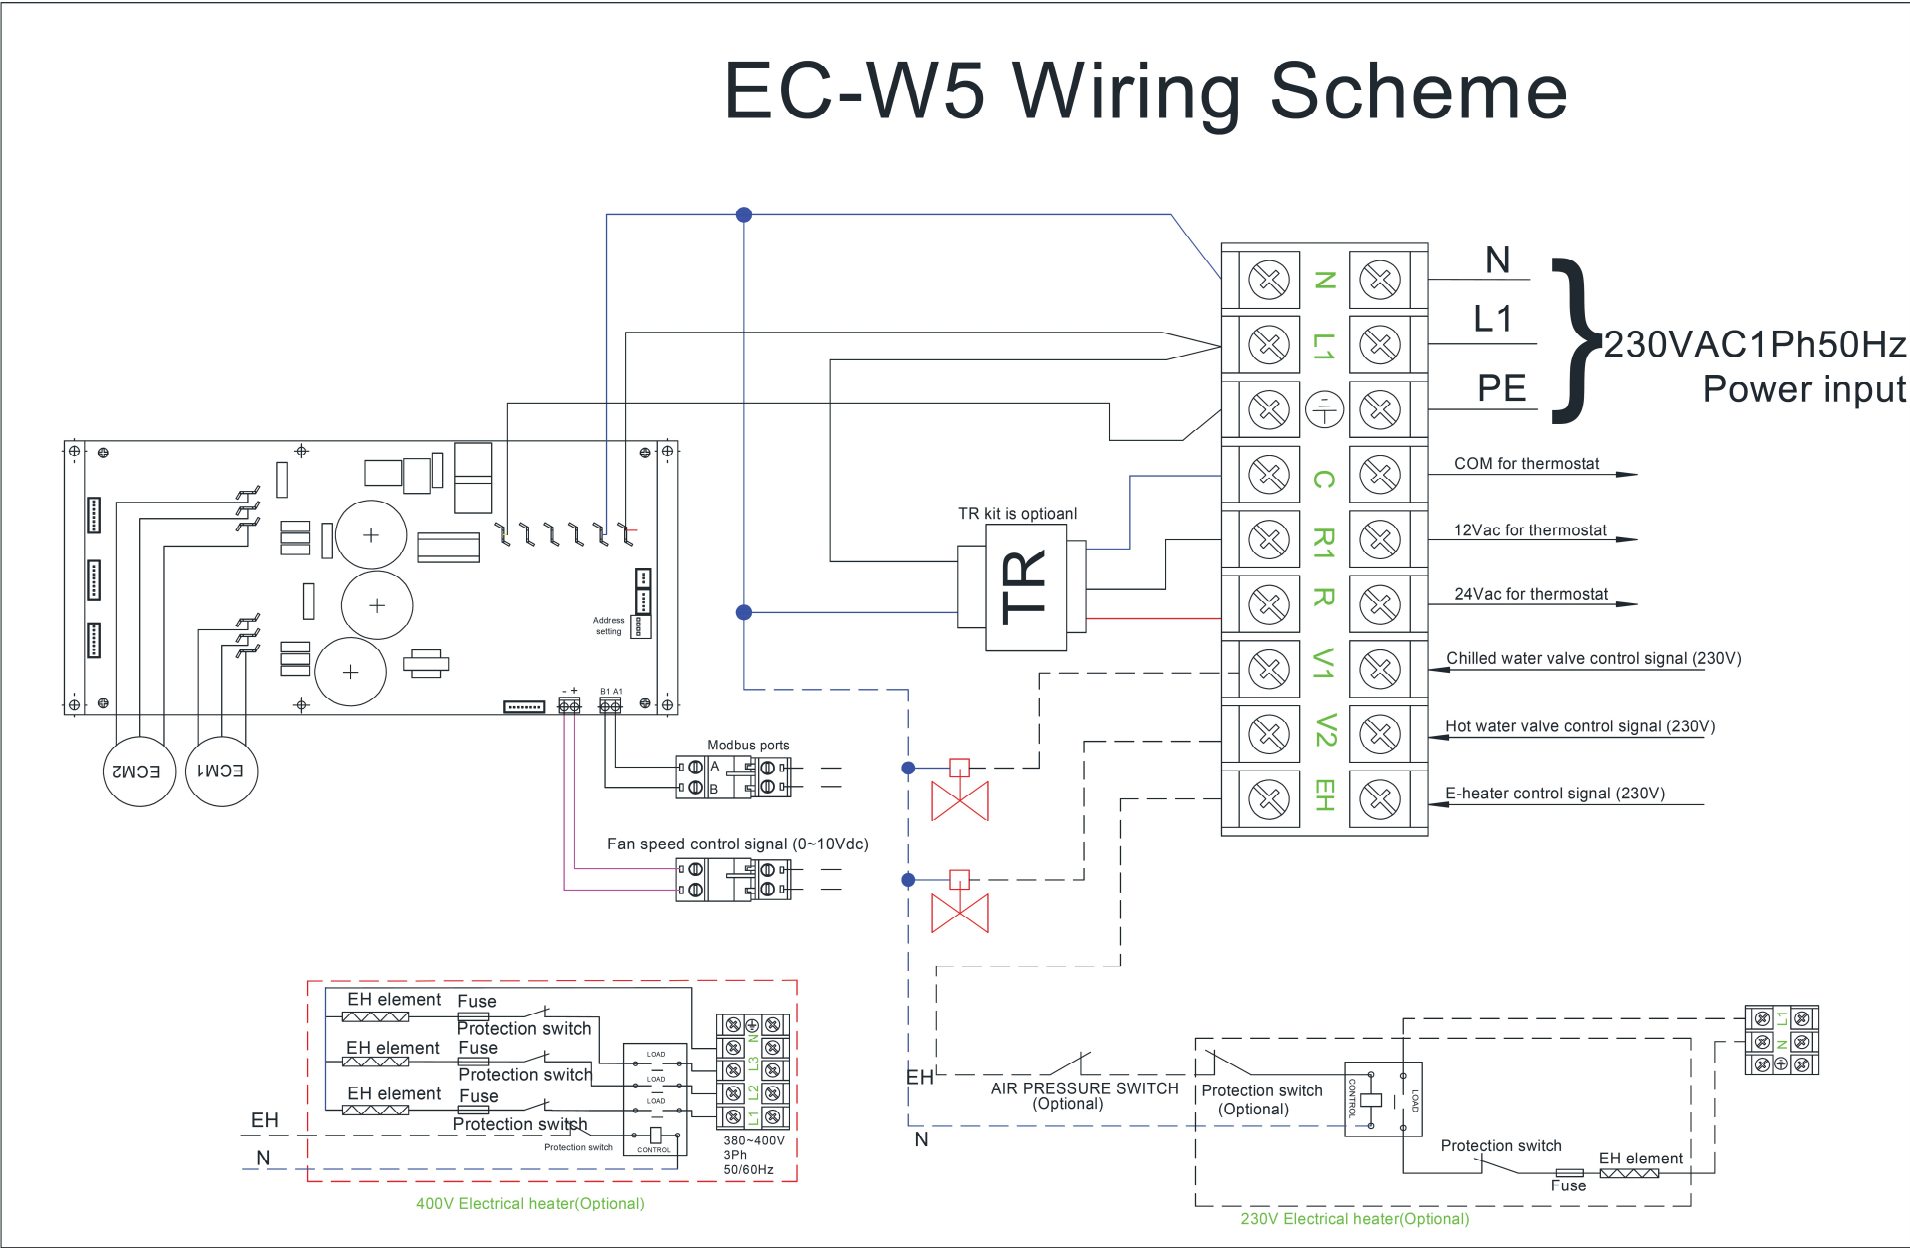

I/O Port Definitions For W

I/O		Code	
Voltage input	Phase	L1	External 230VAC power supply connection to the PCB
	Neutral	N1	
	Earth	GND	
Signal Input	Modulating signal1	+/-	Low voltage modulating signal input (0-10Vdc)
Voltage output	DC motor 1	U, V, W	3-wire connection for DC motor1
	DC motor 2	U1, V1, W1	3-wire connection for DC motor2 only for W5
Communication port	Modbus Port	A, B	Modbus Protocol

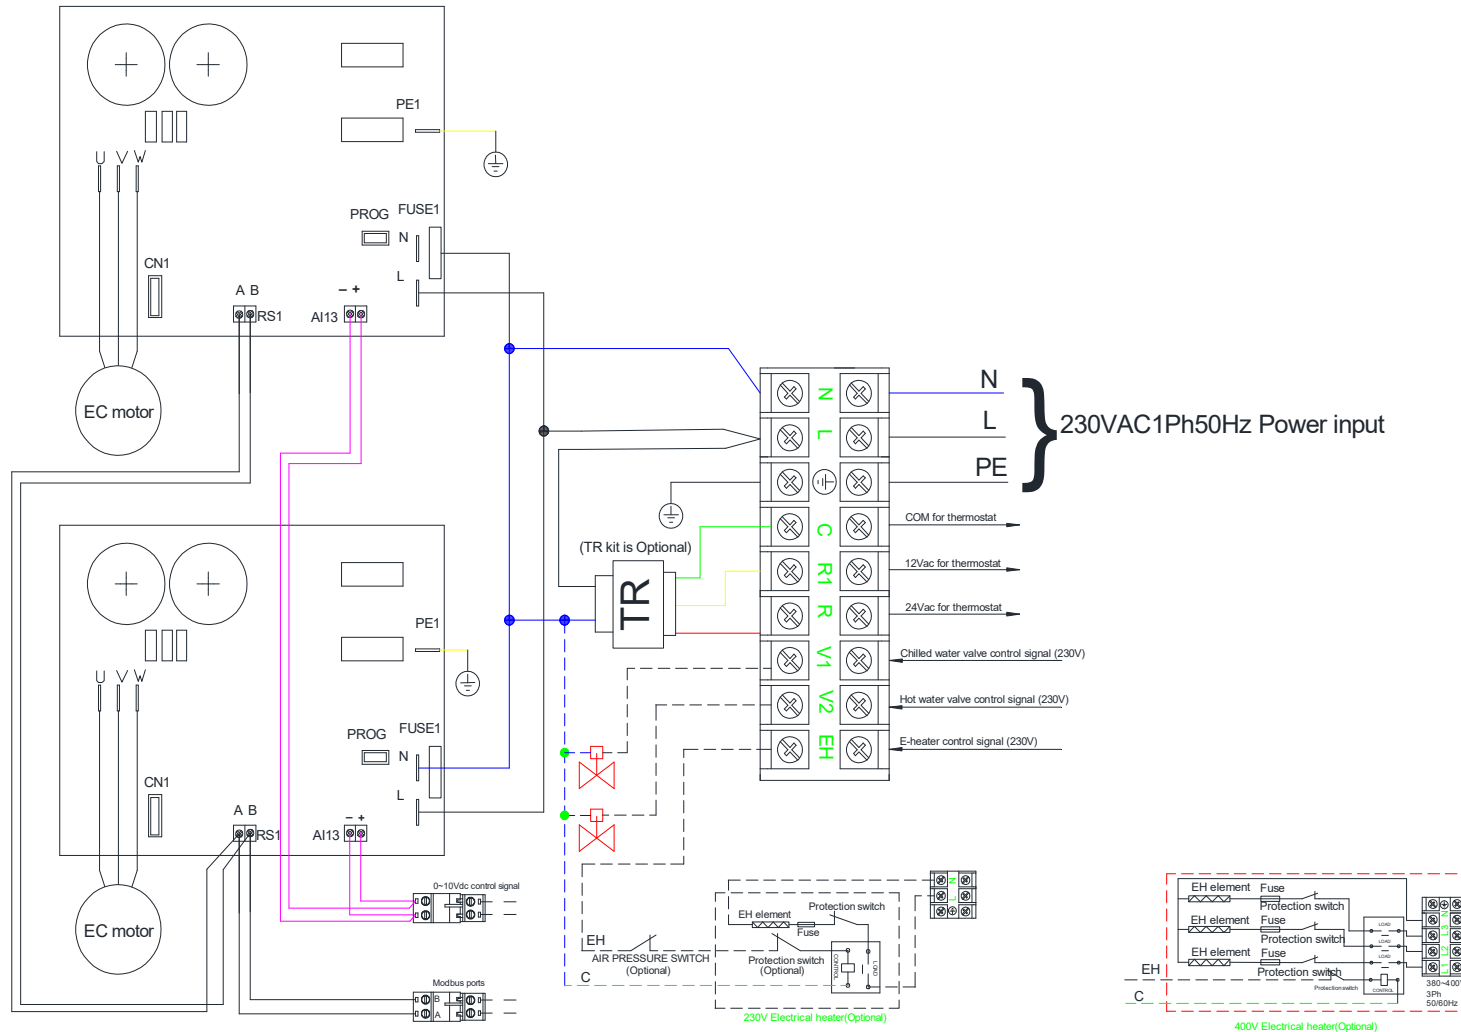

E.2. Wiring Diagrams for W type

Flexible Function PCB W4 for HAHU-200~400-EC

iSerial-EC-2W4 Wiring Diagram

E.3. Control Logic Specifications

E.3.1. Control Logic Specifications for W4/W5

The unit is turned ON when modulating signal input is more than 2.0VDC or Modbus 300006 and 300007 settings;

The unit is turned OFF when modulating signal input is less than 2.0VDC and Modbus 300006 and 300007 settings.

E.4. Open Modbus Protocol

E.4.1. Open Modbus Protocol (For EC-W4/W5 PCB)

Transfer Mode: RTU, BAUD Rate: 9600bps, 8 data bit, 1 stop bit, None parity bit

The communications require a delay between reading an answer and sending the next command of 80ms. All temperature is equal to reading data*10 accuracy: 0.1 degree C.

Holding Register table:

Description	Address	Type*	Remark
EC1 Minimum RPM	300001	R/W	200rpm-1500rpm

S8	Timer-ON	S21	Room Temperature	S34	C-cooling
S9	Timer-ON time Normally: Real time	S22	RH (if need)	S35	H-heating
S10	Timer-OFF	S23	CO2 density (if need)	S36	Energy consumption
S11	Timer-OFF time	S24	PM2.5 density (if need)	S37	Energy consumption cycle
S12	Cooling Mode	S25	Data Display		
S13	Dehumidification	S26	RH percentage		
S38	On/Off Button	S40	Fan speed setting	S42	Up
S39	Mode setting	S41	Parameter setting	S43	Down

F.2.2. Operation guide

S38	On/OFF Button	Press  to turn on. Press it again to turn off.
S39	Mode button	With wall pad on, p  to select Cooling, Dehumidification, Heating, Ventilation or Auto sequentially.or Auto sequentially.
S40	Fan Speed Button	Press  to change from 0 to3. 0=Auto speed, 1=Low speed, 2=Medium speed, 3=High speed.
S41	Parameter Setting Button	Long press  for 5 seconds to set today's day of week. Press  or  to change from Monday to Sunday.
		Long press  for 5 seconds then short press it once to set current time. Press  or  to change current time.
		Long press  for 5 seconds then short press it twice to set Timer ON. Press  to set day of week from Monday to Sunday. Press  or  to change Timer ON time. Press  to turn Timer ON on or off and S8 appears or disappears.
		Long press  for 5 seconds then short press it 3 times to set Timer OFF time. Press  to set day of week from Monday to Sunday. Press  or  to change Timer OFF time. Press  to turn Timer OFF on or off and S10 appears or disappears.
		Long press  for 5 seconds then short press it 4 times to set group control and U31 appears. The function is reserved.
		Long press  for 5 seconds then short press it 5 times to set unit address and U32 appears. Press  or  to change unit address.
		Long press  for 5 seconds then short press it 6 times to set unit parameters (Professional Engineer) U00 and 0000 appear. 0000 is password for below parameters reading or writing. Password Setting: Press  to select number position and Press  or  to increase or decrease number. 1111 is a default password for below parameter reading. 8888 is a default password for below parameter reading and setting. Press  to read U001~U031 parameters. Press  to set U001~U031 parameters and Press  or  to increase or decrease parameter setting.

S31/S32 displays "U001", which is used to set unit type.
 0=iAIR Mode: Ventilation T, RH, CO2, PM2.5 are displayed.
 1=iFCU Mode: S12, S13, S14, S15, S16, S21 or S20 is displayed.
 2=iAHU Mode: S12, S13, S14, S15, S16, S21 or S20 is displayed.
 3=iAHU with air cleaner Mode: S12, S13, S14, S15, S16, T, RH, CO2, PM2.5 are displayed.

S31/S32 displays "U002", which is used to set unit of temperature degree.
 0=Celsius degree.
 1=Fahrenheit degree.

S31/S32 displays "U003", which is used to select display temperature on LCD.
 1=Setting temperature.
 0=Room temperature.

S31/S32 displays "U004", which is used to set setting temperature range.
 0=Setting temperature is from 16~30°C.
 1=Cooling setting temperature 24°C, Heating setting temperature 21°C.

S31/S32 displays "U005", which is used to set setting temperature band.
 1~9°C.

S31/S32 displays "U006-U009", which are reserved to set parameters with optional accessory to measure PM2.5 and CO2 values.

S31/S32 displays "U010~U011", which are reserved.

S31/S32 displays "U012", which is used to set setting RH point.
 30~70, default: 50

S31/S32 displays "U013", which is used to set setting RH band.
 10~30, default: 10

S31/S32 displays "U014", which is used to set unit address.
 1~255, default: 1

S31/S32 displays "U015", which is used to set unit ESP.
 0~100%, default: 40%

S31/S32 displays "U016", which is reserved.

S31/S32 displays "U017", which is used to set software. (please refer to different PCB)
 0=2-pipe with valve
 1=2-pipe without valve
 2=4-pipe with std valve
 3=4-pipe with 6-way valve

S31/S32 displays "U018", which is reserved.

S31/S32 displays "U019", which is used to set DA1 function
 When U001=2,3
 U019=0, fan control signal is based on Tr, Ts PID calculation
 U019=1, fan control signal is based on ESP PID calculation

S31/S32 displays "U020", which is used to calibrate the sensor on the wired wall pad.
 -5~5, default: -3

S31/S32 displays "U021", which is used to set EH function
 U021= 0, without EH.
 U021= 1, EH as booster.
 U021=2, EH as primary.

S31/S32 displays "U022", which is used to select Tr sensor.
 0=the sensor in the WWP.
 1=the sensor in the PCB.

S31/S32 displays "U023", which is used to display cooling and heating energy consumption.

		<p>0=S34/S35/S36/S37 disappears 1=S34/S35/S36/S37 appears In cooling and dehumidification mode, cooling energy consumption is shown. In heating mode, heating energy consumption is shown. 2=Motor running time is shown.</p> <p>S31/S32 displays “U024”, which is used to set low speed RPM or control signal.</p> <p>S31/S32 displays “U025”, which is used to set medium speed RPM or control signal.</p> <p>S31/S32 displays “U026”, which is used to set high speed RPM or control signal.</p> <p>S31/S32 displays “U027”, which is used to set Delta T OF Ti1/Ti2.</p> <p>S31/S32 displays “U028”, which is used to set Delta T OF Ti3/Ti4.</p> <p>S31/S32 displays “U029”, which is used to read unit type.</p> <p>S31/S32 displays “U030”, which is used to read unit model.</p> <p>S31/S32 displays “U031”, which is used to read unit manufacturing date.</p>

Combination Button Function	Screen Lock Function	
	Long press  for 5 seconds, S19 appears and screen is locked.	
	Long press  for 5 seconds again, S19 disappears and screen is unlocked.	
	Swings Function	
	Long press  for 5 seconds, S18 appears and swings is ON.	
	Long press  for 5 seconds again, S18 disappears and swings is OFF.	
	Sleep Mode	
	Long press  for 5 seconds, S17 appears and sleep mode is ON.	
	Long press  for 5 seconds again, S17 disappears and sleep mode is OFF.	

F.2.3. Error Code List

Error Description	Code	Reason	Remedy
Room temperature sensor error	E1	Room sensor unplugged or damaged.	1. Check if Tr plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Indoor coil sensor 1 failure	E2	Ti1 sensor unplugged or damaged.	1. Check if Ti1 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Indoor coil sensor 2 failure	E3	Ti2 sensor unplugged or damaged.	1. Check if Ti2 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Float switch error	E4	Float switch is opened.	1. Check if the condensate water pipe is connected or not.
			2. Check if the pump is functioning or not.
Indoor coil low temperature protection	E5	Water temperature is lower than 3 °C.	Check the water temperature.
Indoor coil over-heat protection	E6	Water temperature is higher than 70 °C.	Check the water temperature
Filter switch protection	E7	Filter Switch is open.	Replace or clean filter.
Electric Heater failure	E8	Only for unit with EH.	1. Change fan speed to high.
		EH safety switch is opened.	2. Replace the damaged EH safety switch.
EC motor failure(CN4)	E9	No EC motor feedback	1. Check Modbus setting.
			2. Check the EC motor.
EC motor failure(CN5)	E10	No EC motor feedback	1. Check Modbus setting.
			2. Check the EC motor.
Motor qty setting error (S6 PCB)	E11	Motor Qty setting error	1: check Modbus setting
Anti-frozen protection	E12	When unit is standby, Tr<2°C.	1. Turn on unit to keep Tr high than 5°C
Indoor coil sensor 3 failure (S6 PCB)	E13	Ti3 sensor unplugged or damaged.	1. Check if Ti3 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Indoor coil sensor 4 failure (S6 PCB)	E14	Ti4 sensor unplugged or damaged.	1. Check if Ti4 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
PM2.5 sensor failure (S6 PCB)	E15	PM2.5 sensor unplugged or damaged.	1. Check if PM2.5 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
AQI sensor failure (S6 PCB)	E16	AQI sensor unplugged or damaged.	1. Check if AQI plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Wired Wall Pad failure	E17	WWP unplugged or not well	Check plugs

F.2.4. Dimensions and installation

Dimensions

Installation

H. Troubleshooting

Symptoms	Cause	Remedy
The fan coil does not start up	No voltage	Check for presence of voltage Check fuse on board
	Mains switch in the "OFF" position	Place in the "ON" position
	Faulty room control	Check the room control
	Faulty fan	Check fan motor
Insufficient output	Filter clogged	Clean the filter
	Air flow obstructed	Remove obstacles
	Room control regulation	Check the room air sensor
	Incorrect water temperature	Check the water source
	Air present	Check the air vent
Noise and vibrations	Contact between metal parts	Check for loosening parts
	Loose screws	Tighten screws
