INSTALLATION, OPERATION AND SERVICE MANUAL
PCSL-V-EC

1-WAY CASSETTE

INVESTING IN QUALITY, RELIABILITY & PERFORMANCE

ISO 9001 QUALITY

Every product is manufactured to meet the stringent requirements of the internationally recognized ISO 9001 standard for quality assurance in design, development and production.

World Leading Design and Technology

Equipped with the latest air-conditioning test rooms and manufacturing technology, we produce over 50,000 fan coil units each year, all conforming to the highest international standards of quality and safety.

CE SAFETY STANDARDS

All products conform to the Certificate Europe directives (Machinery Safety, Electromagnetic Compatibility and Low Voltage), as required throughout the European Community, to guarantee correct standards of safety.

The Highest Standards of Manufacturing

In order to guarantee the very highest standards and performance, we manage every stage in the manufacturing of our products. Throughout the production process we maintain strict control, starting with our extensive resources in research and development through to the design and manufacture of almost every individual component, from molded plastics to the assembly of units and controllers.

EUROVENT CERTIFICATION

All products conform to the "**WEEE**" directive to guarantee correct standards of environmental solutions.

Quality Controlled from Start to Finish

Our highly trained staff and strict quality control methods enable us to produce products with an exceptional reputation for reliability and efficiency, maintained over many years. As well as CE certification and ISO 9001, several products ranges have UL / ETL safety approval in the USA and Canada, Eurovent performance and sound certification as well as ROHS compliance for Europe, giving you the confidence of knowing our company is the right choice when selecting fan coil units.

ALWAYS MAKE SURE THIS MANUAL REMAINS WITH THE UNIT. READ THIS MANUAL BEFORE PERFORMING ANY OPERATION ON THE UNIT.

PA24 PCSL-V-ECM-001

A. Technical Data

A.1. General Description

The Super Slim Hydronic Cassette makes each served area an independent controlled temperature zone to suit diverse requirements.

Construction
Casing is constructed of durable flame resistant acrylonitrile-butadiene-styrene (ABS) plastic. RAL9010 fascia is constructed of high-impact polystyrene.

Chilled water coil
Coils are constructed with seamless copper tubes and headers. The tubes are mechanically expanded into corrugated aluminum fin material for a permanent primary to secondary surface bond. Coils are tested under water pressure at 3500 kPa and recommended for operation at 2000 kPa water pressure. Coils include manual air vent and water purge.

Blower and Motor
The unit incorporates only specially designed and tested EC motors, allowing the blower wheel to provide optimum performance in airflow-efficiency and quiet operation.

Filters
Washable, easy-to-remove, fine mesh air filters are standard to all high-wall models. Tabs located on the front of the unit can be unsnapped, allowing the filter to be easily slid downward and removed. No tools are required, nor any dismantling of the equipment.

Air Grille Distribution
The unit is equipped with both deflector blades and independent directional vanes, enabling supply air to be automatically distributed, and air flow and direction to be customized.

Condensate pump
A condensate pump is fitted to carry water out of the unit. The pump is fixed to a mounting bracket. The pump can be withdrawn from the bottom after removing the front panel. A float switch is fitted to stop the cooling action when the pump become blocked or failed.

CONTROL SYSTEMS
1. Intelligent control (I type)
Intelligent control board is controlled via Infra-red handset and/or Intelligent wired wall pad, is field programmable and easy to be configured through the wired wall pad or open Modbus protocol with VWV and VAV control logics, provides variable speed indoor fan control, integrates with Intelligent modulating valves to allow Auto Dynamic Balancing and Intelligent Constant Delta T management systems. It controls 2-pipe, 2-pipe with electric heater, 2-pipe with 6-way valve and 4-pipe systems.
2. Flexible control (W type)
This control options features flexible functionality for external thermostat applications, allowing the independent control of drain pumps (if equipped), offering zone control operations, and limited diagnostics. In products where louvers are required, this control allows the stepping motors to open the louver at maximum position or close them when power of the unit is OFF.

Sound Power in 1/3 Octave-bands under ESP:0Pa (dB)

B. Installation

B.1. Safety Precautions

- When installing, performing maintenance or servicing Polar Air fan coil units observe the precautions stated in this manual as well as those stated on the labels attached to the unit.

- Ensure all local and national safety codes, laws, regulations, as well as general electrical and mechanical safety guidelines are followed for installation, maintenance and service.

- The appliance is for indoor use only.

- Ensure the correct power supply is provided.

- If the power supply cord is damaged, it must be replaced by qualified personnel.

- Installing and servicing fan coil unit should be performed by qualified service personnel only.

- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or persons lacking in experience and knowledge of the appliance, unless they have been given supervision or instruction concerning it.

- User of this appliance is responsible for his/her own safety.

- Warranty shall be voided if installation instructions and safety precaution stated in this manual are not observed.

- Never cut off the mains supply when unit is under operation. The unit should only be switched off by using the ON-OFF button on the control interface.

- During connections, select pipe pliers according to pipe diameter to avoid damaging units over forced.

- Untreated frozen water and cooling water may cause dirt accumulation and corrosion. Suggest using treated water. Suggested working water pressure is below 1.6 Mpa.

- When units are in cooling mode, suggested freezing water degree is $\geq 7\,℃$; When units are in heating mode, suggested hot water degree is $\leq 60\ ℃$.

- Condensate water pipe, water connection pipe, water connectors and solenoid valve body must remain heat to avoid condensation.

> **CAUTIONS**
>
> *Before any service or maintenance operations turn off the mains electrical supply.*
>
> *DO NOT turn OFF the main power supply when the unit is operating. Turn off the unit BEFORE turning off the main power.*

B.2. Before Installation

- The installation site must be established by the system designer or other qualified professional, taking account of the technical requisites, current standards and regulations.

- Super slim cassette fan coil unit must be installed by qualified personnel only.

- Super slim cassette fan coil unit is designed for installation in a lowered ceiling.

- Super slim cassette fan coil unit must be installed in such a way as to enable treated air to circulate throughout the room and allow the minimum distance required for technical maintenance operation.

- It is advisable to place the unit close to the installation site without removing it from packaging.

- Do not put heavy tools or weights on packaging.

- Upon receipt, the unit and the packaging must be checked for damage sustained in transit and if necessary, a damage claim must be filed with the shipping company.

- Check immediately for installation accessories inside the packaging.

- Do not lift unit by the condensate drain discharge pipe, by the water connections or by front panel; lift the unit using four mounting brackets. (Figure B.4)
- Check and note the unit serial number.

Figure B.4

B.3. Installation Location

- Do not install the unit in rooms where flammable gas or alkaline acid substances are present. Aluminum/copper coils and/or internal plastic components can be damaged irreparably.
- Do not install in workshops or kitchens; drawn in oil vapors might deposit on the coils and alter their performance or damage the internal plastic parts of the unit.
- If installation of unit includes using a lift, insert a plywood sheet between the unit and the lift forks to avoid damaging unit. (Figure B.5.1)
- It is recommended to locate the unit near one side of room to ensure optimum air distribution. (Figure B.5.2)
- Generally, the best louver position is the one which allows air diffusion along the ceiling. Alternative positions can be selected.
- Confirm sufficient space is provided to allow removal of panels from the ceiling in the selected position and to allow enough clearance for maintenance and servicing operations.
PA24 PCSL-V-ECM-001

Figure B.5.1

Figure B.5.2

B.4. Ceiling Clearance

- Verify inlet and outlet grilles are not obstructed to ensure proper air flow.
- Confirm location allows condensate to be properly drained.
- Confirm height between the bottom of upper deck and top of ceiling is sufficient for installation. (Figure B.6)
- Ensure there is sufficient space around the unit to provide installation and service.

Figure B.6

Model	B (mm)
PCSL-01/02	Minimum 10

PA24 PCSL-V-ECM-001

B.5. Condensate Drainage Connection

- The unit is fitted with a condensate pump with a maximum of 500mm lift. (Figure B.7.1)
- The unit is provided with an ABS drainage outlet.
- Confirm drain outlet has not been damaged before connecting drainpipe to unit.
- Discharge pipe may be connected with hose clamp. (Figure B.7.2)
- Insulate drainpipe after installation.

Figure B.7.1

Figure B.7.2

Caution

Factory-provided drain outlet is ABS. Using an unsuitable glue may damage the outlet.

B.6. Water Connections and Valve Configurations

The Super Slim Cassette unit is provided with 1/2" water piping connections with gaskets.

- ~I: Units are compatible with:

1. 230VAC 2-way or 3-way on/off valves (thermoelectric or electric motor-driven actuation), with OPEN/CLOSE state actuation.
2. 24VAC 2-way or 3-way modulating valves with 0-10VDC modulating signal (motor-driven actuation) and variable size aperture (10% to 100%).

- ~W: Valve control requires external wired thermostat. See thermostat manual for details.

- Review below table for Valve diameter:

Model	External valve information	
	Type	Connector dia. (inch)
All models	2-way & 3-way	3/4"

- Valve installations:

See external valve installation below:
> **Caution**
>
> *The valve body and connection pipes must be fully insulated to prevent condensation.*

## B.7. Suspension Bolts Layout and Ceiling Opening

Using the installation template, remove and/or modify the ceiling panels and install suspension bolts as in the images below.

1102 x 446: Dimensions for opening
1010.4 x 280.4: Suspension Bolts

- Mark position of field supplied suspension rods, water lines, condensate drainpipe, line voltage and low voltage wiring.
- Properly attach suspension rods to structure above.
- Do not tighten nuts and counter nuts. This should only be done after all connections are made and leveling of unit is confirmed.
- Verify installation accommodates proper condensate drainage to pump.
- Be careful while lifting fan coil unit into position. Do not lift the unit by condensate tray.

Counternut
Installation Procedures:

1. Lift unit (without front panel) with care by four corners only. Do not lift unit by the condensate drain discharge pipe or piping connections.
2. Incline and insert the unit into the ceiling. Insert support rods into the bracket slot.
3. Line up the unit to the supporting bars of the ceiling by tightening the nuts and counter nuts of the suspension rods.
4. After connecting the condensate drain piping and piping connections, confirm fan coil is level.
5. Check to ensure the unit is level. Drain will be at lowest point when unit is level.
6. Tighten nuts on the suspended rods.

All models	3mm

B.8. Electrical Connection

- It is recommended using screened cable in electrically noisy areas.
- Do not install fan coil unit in a location where electromagnetic waves may be directly emitted towards infra-red receiver on the unit.
- Install the unit and components as far away as is practical (at least 5m) from any electromagnetic wave source.
- Use shielded sensor cable in where electromagnetic waves exist.
- Install a noise filter if necessary.
- Always take safety precautions before wiring for mains supply. See section B.1. for Safety Precautions.
- One standard power cord (optional), two auxiliary contacts for outdoor unit or Electric Heater, one window contact, one wired wall pad contact and two cooling / heating valve plugs are integrated with PCB.
- Refer to Section D and E for Control PCB configurations and wiring diagrams.

PA24 PCSL-V-ECM-001

B.9. Mounting Front Panel Assembly

Step 1: Remove return grille and filter from front panel, then move the front panel to the unit casing.

Step 2: Connect LED wiring plugs, then tighten screws to attach the front panel.

Step 3: Insert the filter and return air grille into the unit, then lock the two fasteners on the front panel.

B.10. Start-Up

- The unit should not be started up until the system piping has been cleaned and all the air has been purged.
- Check condensate drainpipe slope.
- Confirm the condensate water pump in good working order.
- Confirm float switch did not loosen or become dislodged during shipping. Use the following steps to confirm pump functionality:
    1. Install the cassette unit in an absolute horizontal position.
    2. Fill the internal drain pan (manually) with enough water to confirm the drain pump is working.
    3. Confirm flow of water through condensate drainpipe. If the water is not expelled, verify float switch is has not been damaged.
    4. Verify air filter is clean and properly installed.
    5. Ensure that voltage and current values correspond with the unit nameplate values; check electrical connections.
    6. Verify louver is open.

C. Maintenance

- Turn off the main power switch before performing any service or maintenance operations. Please see section B.1. "Safety Precautions".
- The air filter is made of acrylic fiber and is washable in water.
- Open the intake grille by releasing the two fasteners to remove filter.
- Check the filter before the operating season and then periodically while in use; clean or replace as necessary.

C.1. For Units Out Of Use for Extended Period.

Prior to restarting the unit:
- Clean or replace the air filters.
- Check and remove any obstructions from the internal drain pan and condensate drain line.

C.2. Extra Maintenance

- The electrical panel is easily accessible by removing the cover panel.
- Inspection, servicing, and replacement of internal components such as coil, condensate pump, float switch and drain pan are accessible via cover panel.
- Be aware of water spillage when removing the condensate drain pan
- Release the drain pan fixing screws and remove the condensate drain pan with care.
-

C.3. Air Vent and Water Purge

Step 1: Remove grille and filter.

Step 2: Operate air vent / water purge valve by turning the knobs.

knobs

PA24 PCSL-V-ECM-001
C.4. Control PCB Replacement

Repeat Step 1 at C.3.

Step 2: Release 3 to remove Control Box cover.

Step 3: Remove screws on PCB and install replacement.

C.5. Motor or Drain Pump Replacement

Repeat Step 1 at C.3.

Step 2: Release screws shown below to remove front panel.

Step 3: Release screws shown below to remove internal drain pan.

Step 4: Remove Drain Pump/Motor mounting screws, then replace it.

PA24 PCSL-V-ECM-001

D. Control Specifications: Intelligent Control (I Type)

D.1. I/O Port Definitions

| I/O		Code	Description
Analogue Input	Return air sensor	AI1	Return air temperature (Tr)
	2-pipe coil circuit sensor	AI2	Water inlet temperature sensor (Ti1)
	2-pipe coil circuit sensor	AI3	Water outlet temperature sensor (Ti2)
Input	LED display / IR receiver	X-DIS 1	Digital communication port to LED display / IR receiver board.
	Wired wall pad	TTL1	Digital communication port to wired wall-pad board.
Digital input	Occupancy contact	ON/OFF	NO/NC contact by setting
	Float switch	Float	Voltage-free (NC). The contact is connected with float switch (NC).
	Electric Heater safety switch	EH	Voltage-free (NC). The contact is connected with E-heater safeties.
Power input	Phase	L1	Power supply to the PCB.
	Neutral	N1	Power supply to the PCB.
	Earth	PE1	Power supply to the PCB.
Voltage output	Fan 1	CN4	Fan 1 driver
	Fan2	CN5	Fan 2 driver
	Valve1	MTV1	On/off valve
	Valve2	MTV2	On/off valve
	Water pump	WP	Voltage output (L), Power supply to condensate pump.
	Voltage of Electric Heater (Live)	L-EH	Voltage output (L), maximum 30A.
	Stepping motor	CN1-2	Power supply to louver stepping motors.
output	Cooling signal contact.	AUX1	Voltage free contact. Maximum load 5A.
	Heating signal contact.	AUX2	Voltage free contact. Maximum load 5A.
	24VAC power input	DA1	24VAC external power supply (modulating valve applications only).
	Modulating valve control	DA2	0~10VDC
	Modulating valve control	DA3	0~10VDC
	In Modbus signal	AB	Modbus port
	Out Modbus signal	AB

D.2.2. Fan Coil Unit ON/OFF

There are 3 ways to turn the system on or off:

- By the ON/OFF button on the remote handset or wired wall pad.
- By the programmable timer on the handset or wired wall pad.
- By the manual control button on fan coil unit.

D.2.3. Auto Restart

The system uses a non-volatile memory to save the present operation parameters when the system is turned off or in case of system failure or cessation of power supply.

The restored parameter data-set depends on the type of user interface.

a) Handset only user interface:

When the power ON signal is received by the fan coil unit and no wired wall-pad is installed, the Mode, Fan Speed, Set temperature and Louver setting will be the same as the handset setting before the last power OFF.

b) Wall-pad only OR wall-pad and handset user interface:

When the power ON signal is received by the fan coil unit and a wired wall-pad is installed, the Mode, Fan Speed, Set temperature, Louver setting and Timer ON/OFF weekly program will be the same as the wall pad setting before the last power OFF.

D.3. Control Logic For 2-Pipe System
D.3.1. With Modulating Valve Configuration

COOL MODE

When unit is turned on in cooling mode.

If Tr ≥ Ts + 1ºC (Modbus 300033 setting), MTV1 is turned on. AUX1 is closed. Fan is turned on at setting speed.
DA2 is turned on at 10 VDC for 2 minutes, then check Ti1:

- When Ti1<=8ºC, DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300027 setting PID calculation. The output is minimum output (Modbus300015 setting) ~10 VDC.
- When 8<Ti1<=10ºC, DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300027 setting minus 1 PID calculation. The output is minimum output (Modbus300015 setting) ~10 VDC.
- When 10<Ti1<=12ºC, DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300027 setting minus 2 PID calculation. The output is minimum output (Modbus300015 setting) ~10 VDC.
- When 12<Ti1<=15ºC, DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300027 setting minus 3 PID calculation. The output is minimum output (Modbus300015 setting) ~10 VDC.
- When 15<Ti1<=28ºC (Modbus 300017 setting), DA2 output is kept at 10 VDC.
- When Ti1>28ºC(Modbus 300017 setting), DA2 output is at minimum (Modbus300016 setting); and report pre-heat alarm;
- If Tr < Ts- 1ºC (Modbus 300033 setting), then cool operation is terminated and MTV1 and AUX1 are turned off. Indoor fan runs at set speed. DA2 output is 0 VDC.
- When unit is turned off, MTV1 and AUX1 are off. DA2 is 0V dc. Fan is turned off delaying 30s.
- The range of Ts is 16 - 30ºC.
- Indoor fan speed can be adjusted to low, medium, high and auto.

LOW TEMPERATURE PROTECTION OF INDOOR COIL IN COOLING MODE

If Ti1 ≦ 2 ºC for 2 minutes
- MTV1 is turned OFF.
- DA2 is set to 0%.
- Indoor fan is turned on to Medium speed if fan runs at low speed.

If Ti1 ≧ 5ºC for 2 minutes
- MTV1 is turned ON.
- DA2 is set to original status.
- Indoor fan is changed to setting speed.

FAN MODE

Indoor fan speed can be adjusted for low, medium and high. If fan speed is set auto by Modbus, fan is running at low speed.

HEAT MODE

Without Electrical Heater （Modbus300047=0）

When unit is turned on in heating mode.

- When Tr ≤ Ts - 1 ºC(Modbus 300033 setting) , MTV1 and AUX2 is turned on; DA2 is at 10 VDC for 2 minutes, then check Ti1:
- If Ti1 < 28ºC (Modbus 300017 setting), fan is turned on at low speed; DA2 is at 10 VDC.
- If 28ºC<Ti1< 28（Modbus 300017 setting）+4ºC, fan is on at original state. DA2 is at original state.
- If Ti1 ≥ 28（Modbus 300017 setting）+4ºC, fan is on at setting speed; DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300028 setting PID calculation. The output is minimum output (Modbus300015 setting) ~10 VDC.
- If Ti1 sensor is damaged, fan runs at setting speed.
- When Tr > Ts+ 1ºC (Modbus 300033 setting), MTV1 and AUX2 is turned off. DA2 is at 0 VDC. Fan is turned on at lowest speed.
- When unit is turned off, MTV1 and AUX2 is turned off. DA2 is at 0 VDC. Fan is turned off delaying 2 minutes.

With Electrical Heater as booster（Modbus300047=1）

When unit is turned on in heating mode.

When Tr ≤ Ts - 1 ºC (Modbus 300033 setting), MTV1 and AUX2 is turned on. Fan is turned on at setting speed. DA2 is at 10 VDC for 2 minutes, then check Ti1:

- If Ti1 < 28ºC (Modbus 300017 setting), EH is turned on. DA2 is at 10 VDC.
- If 28ºC<Ti1< 28（Modbus 300017 setting）+4ºC, EH is kept at original state. DA2 is at original state.
- If Ti1 ≥ 28（Modbus 300017 setting）+4ºC, EH is turned off; DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300028 setting PID calculation. The output is minimum output (Modbus300015 setting) ~10 VDC.
- If Ti1 sensor is damaged, fan runs at setting speed.
- When Tr > Ts + 1ºC (Modbus 300033 setting), MTV1 and AUX2 is turned off. EH is turned off, DA2 is at 0 VDC. Fan is turned on at low speed.
- When unit is turned off, MTV1 and AUX2 is turned off. DA2 is at 00 VDC. Fan is turned off delaying 2 minutes.

With Electrical Heater as primary（Modbus300047=2）

When unit is turned on in heating mode.

- When Ti2 ≤ 35ºC (or Ti2 is broken) and Tr ≤ Ts - 1 ºC(Modbus 300033 setting), fan is turned on at setting speed, EH is turned on.
- When Tr > Ts ºC, EH is turned off. Fan is turned on at low speed.
- When unit is turned off, EH is turned off. Fan is turned off delaying 2 minutes.

OVER-HEAT PROTECTION OF INDOOR COIL
- If Ti1 ≥ 75ºC, then MTV1, AUX2, DA2 and EH are turned off. Indoor fan remains on and runs at high speed.
- If Ti1 < 70ºC, then unit keep original state.
- If the indoor coil temperature sensor is damaged or not connected, then the protection mode will be overridden and the unit will work according to the pre-heat and post-heat program.

DEHUMIDIFICATION MODE
When unit is turned on in dehumidification mode:
- AUX1 is turned on. Ts is 24 ºC.
- If Tr ≥ 25ºC for 30S, then MTV1 will be on for 3 minutes, and then off for 4 minutes. DA2 is on at 3 times of (Modbus 300016 setting). Fan is turned on at low speed.
- If 16ºC ≤ Tr < 25ºC for 30S, then MTV1 will be on for 3 minutes, and then off for 6 minutes. DA2 is on at double of (Modbus 300016 setting). Fan is turned on at low speed;
- If Tr < 16ºC for 30S, then MTV1 will be on for 3 minutes, and then off for 10 minutes. DA2 is on at (Modbus 300016 setting). Fan is turned on at low speed.
- At the end of the above dehumidification cycle, the system will decide the next dehumidification control option.

AUTO MODE
When unit is turned on in Auto mode, fan is turned on at setting speed for 30S, then check Tr and Ts:
- If Ts>=Tr+3 ºC, the unit runs in heating mode.
- If Tr-3 ºC<Ts<Tr+3 ºC，the unit runs in fan mode.
- If Ts<Tr-3 ºC， the unit runs in cooling mode.
- If unit working mode is confirmed, the unit will not change the working mode. After the unit is turned off and restart it in 2 hours, working mode will be confirmed again.

PRO INPUT FUNCTION
When 100004=0
The unit is on:
- PRO input is closed for 60S, the unit is turned off.
- PRO input is open for 60S, the unit is turned on.

When 100004=1

The unit is on or standby, PRO input is open or closed, the unit is kept original state.

The unit is off.
- PRO input is closed for 30S, MTV1 is turned on, DA2 is open at double of minimum setting (Modbus 300027 setting), and Fan is turn on at low speed.
- PRO input is opened for 30S, MTV1 is off, DA2 is 0 VDC, Fan is turn off.
- In period of PRO closed time, if unit receives instruction from remote handset, wired wall pad or Modbus, the unit will work according to the instruction at once.

D.4. Control logic for 2pipe with 6-way modulating valve configuration
COOL MODE

When unit is turned on in cooling mode.

If Tr ≥ Ts + 1ºC (Modbus 300033 setting), MTV1 is turned on. AUX1 is closed.   Fan is turned on at setting speed. DA2 is turned on at 0 VDC for 2 minutes, then check Ti1:

- When Ti1<=8ºC, DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300027 setting PID calculation. The output is 4~0 VDC.
- When 8<Ti1<=10ºC, DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300027 setting minus 1 PID calculation. The output is 4~0 VDC.
- When 10<Ti1<=12ºC, DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300027 setting minus 2 PID calculation. The output is 4~0 VDC.
- When 12<Ti1<=15ºC, DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300027 setting minus 3 PID calculation. The output is 4~0 VDC.
- When 15<Ti1<=28ºC (Modbus 300017 setting), DA2 output is kept at 0 VDC.
- When Ti1>28ºC (Modbus 300017 setting), DA2 output is 4 VDC, and report pre-heat alarm.
- If Tr < Ts- 1ºC (Modbus 300033 setting), then cool operation is terminated and MTV1 and AUX1 are turned off. Indoor fan runs at set speed. DA2 output is 5 VDC.
- When unit is turned off, MTV1 and AUX1 are off. DA2 is 5 VDC. Fan is turned off delaying 30s.
- The range of Ts is 16 - 30ºC
- Indoor fan speed can be adjusted to low, medium, high and auto.

LOW TEMPERATURE PROTECTION OF INDOOR COIL IN COOLING MODE
If Ti1 ≦ 2 ºC for 2 minutes
- MTV1 is turned off.
- DA2 is set to 5 VDC.
- Indoor fan is turned on to Medium speed if fan runs at low speed.

If Ti1 ≧ 5ºC for 2 minutes
- MTV1 is turned ON.
- DA2 is set to original status.
- Indoor fan is changed to setting speed.

FAN MODE
Indoor fan speed can be adjusted for low, medium and high. If fan speed is set auto by Modbus, fan is running at low speed.

HEAT MODE
Without Electrical Heater （Modbus300047=0）
When unit is turned on in heating mode.

When Tr ≤ Ts - 1 ºC (Modbus 300033 setting), MTV2 and AUX2 is turned on. DA2 is at 10 VDC for 2 minutes, then check Ti1:

- If Ti1 < 28ºC (Modbus 300017 setting), fan is turned on at low speed. DA2 is at 10 VDC.
- If 28ºC<Ti1< 28（Modbus 300017 setting）+4ºC, fan is on at original state; DA2 is at original state.
- If Ti1 ≥ 28（Modbus 300017 setting）+4ºC, fan is on at setting speed. DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300028 setting PID calculation. The output is 6~10 VDC.
- If Ti1 sensor is damaged, fan runs at setting speed.

- When Tr > Ts + 1ºC (Modbus 300033 setting), MTV1 and AUX2 is turned off. DA3 is at 5 VDC. Fan is turned on at lowest speed.
- When unit is turned off, MTV1 and AUX2 is turned off. DA2 is at 5 VDC. Fan is turned off delaying 2 minutes.

With Electrical Heater as booster （Modbus300047=1）
When unit is turned on in heating mode.

When Tr ≤ Ts - 1 ºC (Modbus 300033 setting), MTV2 and AUX2 is turned on. Fan is turned on at setting speed. DA2 is at 10 VDC for 2 minutes, then check Ti1:

- If Ti1 < 28ºC (Modbus 300017 setting), EH is turned on. DA2 is at 10 VDC.
- If 28ºC<Ti1< 28（Modbus 300017 setting）+4ºC, EH is kept at original state. DA2 is at original state.
- If Ti1 ≥ 28（Modbus 300017 setting）+4ºC, EH is turned off; DA2 output is based on water temperature difference (Ti1/Ti2) and Modbus parameter 300028 setting PID calculation. The output is 6~10 VDC.
- If Ti1 sensor is damaged, fan runs at setting speed.
- When Tr > Ts +1ºC, MTV2 and AUX2 is turned off; EH is turned off; DA2 is at 5 VDC; fan is turned on at low speed.
- When unit is turned off, MTV2 and AUX2 is turned off; DA2 is at 5 VDC; Fan is turned off delaying 2 minutes.

OVER-HEAT PROTECTION OF INDOOR COIL
- If Ti1 ≥ 75ºC, then MTV1, AUX2, DA2 and EH are turned off. Indoor fan remains on and runs at high speed.
- If Ti1 < 70ºC, then unit keep original state.
- If the indoor coil temperature sensor is damaged or not connected, then the protection mode will be overridden and the unit will work according to the pre-heat and post-heat program.

DEHUMIDIFICATION MODE
When unit is turned on in dehumidification mode:
- AUX1 is turned on. Ts is 24 ºC.
- If Tr ≥ 25ºC for 30S, then MTV1 will be on for 3 minutes, and then off for 4 minutes. DA2 is 2 VDC. Fan is turned on at low speed.
- If 16ºC ≤ Tr < 25ºC for 30S, then MTV1 will be on for 3 minutes, and then off for 6 minutes. DA2 is 2.5 VDC. Fan is turned on at low speed.
- If Tr < 16ºC for 30S, then MTV1 will be on for 3 minutes, and then off for 10 minutes. DA2 is 3.5 VDC.
- At the end of the above dehumidification cycle, the system will decide the next dehumidification control option.

AUTO MODE
When unit is turned on in Auto mode, fan is turned on at setting speed for 30S, then check Tr and Ts.
- If Ts>=Tr+3 ºC, the unit runs in heating mode.
- If Tr-3 ºC<Ts<Tr+3 ºC, the unit runs in fan mode.
- If Ts<Tr-3 ºC, the unit runs in cooling mode.
- If unit works in heating or fan mode, when Tr-Ts>3.0ºC, MTV2, MTV1 and DA2 is off for more than 10 minutes, EH is off for more than 10 minutes, the unit will work in cooling mode.
- If unit works in cooling or fan mode, when Ts-Tr>3.0ºC, MTV2, MTV1 and DA2 is off for more than 10 minutes, the unit will work in heating mode.

PRO INPUT FUNCTION
The unit is on:
- PRO input is closed for 60S, the unit is turned off.
- PRO input is open for 60S, the unit is turned on.

PA24 PCSL-V-ECM-001

D.5. Sleep Mode

SLEEP mode can only be set when the unit is in COOL or HEAT mode.

- In COOL mode, after SLEEP mode is set, the indoor fan will run at auto speed and Ts will increase by 0.5ºC each 30minutes. Maximum setting temperature increased is 3ºC.
- In HEAT mode, after SLEEP mode is set, the indoor fan will run at auto speed and Ts will decrease by 0.5 ºC each 30 minutes.
- Sleep mode is turned off, setting temperature go back and fan is changed to setting speed.

D.6. Louver

For remote handset.

Whenever the indoor fan is running, the louver can swing or stop at the desired position.

Louver angle: 0~100 º, opens clockwise with widest angle at 100 º.

Swing angle: 35~100 º, opens clockwise to 68º. Below are the 4 fixed positions which can be set from wireless LCD handset.

Position	Angle of opening
1	35 º
2	57 º
3	83 º
4	100 º

For wired wall pad

Louver angle: 0~100 º, opens clockwise, with widest angle at 100 º.

Swing angle: 35~100 º, opens clockwise to 68º. User may stop louver at any desired position between 35~100 º.

D.7. Buzzer

The unit will beep once when it receives a signal.

D.8. Auto Restart

The system uses non-volatile memory to save the present operation parameters when system is turned off or in case of system failure or cessation of power supply. Operation parameters are mode, set temperature, louver's position, and the fan speed. When power supply resumes or the system is switched on again, the same operations as previously set will function.

D.9. On/Off Switch On LED Display

This is a tact switch to select Cool→Heat→Off operation mode.

- In COOL mode, the set temperature of the system is 24ºC with auto fan speed. There are no timer and sleep modes.
- In HEAT mode, the set temperature of the system is 24ºC with auto fan speed. There are no timer and sleep modes.
- Master unit that does not use a wall pad will globally broadcast.

> **NOTE**
>
> *When button pressing is effective, the master unit buzzer will beep twice and the slave unit will beep once.*

D.10. Drain Pump

Drain pump turns ON if the thermostat in turned ON in during cooling or dehumidification mode. It remains ON for at least 5 minutes after the thermostat turns OFF. During mode change from cooling or dehumidification to heating or fan mode, the water pump will turn on for a minimum of 5 minutes.

> **CAUTION**
>
> *If the system is turned off at the circuit breaker (or main power supply), the drain pump will not work.*

D.11. Float Switch

Float-switch opens before unit is turned on
- If the float switch (N/C) is opened before the unit is turned on, then MTV1 is turned off. The drain pump and indoor fan will operate.
- After float switch is closed, MTV1 is turned on.

Float switch is opened when unit is turned on
- If the float switch is opened continuously ≥ 5 seconds, then the drain pump will work and MTV1 will remain off.
- After the float switch is closed, the drain pump will run for an additional 5 minutes. If the float switch is opened for 10 minutes continuously, then MTV1 will remain off. The indoor fan runs at set speed and the system reports an error.

Float switch is opened when unit is turned off
- If the float switch is opened, then the drain pump will work.
- After the float switch is closed, the drain pump will run for an additional 5 minutes. If the float switch is opened for 10 minutes continuously, then the system reports an error.

D.12. Electric Heater Safety Switch

- Before the electrical heater is turned on, the EH safety switch must be closed, EH is open for 3 minutes and EC motor RPM must be more than Modbus address 300020 setting.
- When electrical heater is ON, electrical heater safety switch is opened for ≥ 1 second or EC motor RPM is lower than Modbus address 300020 setting, EH will be turned off immediately and report an error and fan speed is changed to high speed.
- Once the contact is returned to the closed ≥ 180 seconds and EC motor RPM must be more than Modbus address 300020 setting, reset the error and the heater will start again.
- When the EH safety switch is opened ≥ 3 times within 60 minutes the heater is not allowed to start anymore.
- Turn off the unit to reset the fault, provided that the switch has returned to the closed position.

D.13. Low Temperature Protection of Indoor Coil in Winter
This is frost protection for when the unit is off to prevent water in the coil and room from freezing.

If 2pipe unit is in Standby Mode

If Tr $\leqq$ 2 ºC for 2 minutes
- MTV1 is turned ON.
- AUX2 is closed.
- DA2 is 5VDC.
- If Ti1 <5 ºC for 2 minutes EH (if present) is switched on.
- Indoor fan is turned on at low speed.

If Tr $\geqq$ 5ºC for 2 minutes
- MTV2 is OFF.
- AUX2 is open.
- DA2 is set to 0 VDC.
- Electric Heater is turned off.
- Indoor fan is switched off.

If 4-pipe unit is in Standby Mode

If Tr $\leqq$ 2 ºC for 2 minutes
- MTV2is turned ON.
- AUX2 is closed.
- DA3 is 5VDC; if unit with 6-way valve, DA2 is 8 VDC.
- If Ti1 < 5 ºC for 2 minutes EH (if present) is switched on.
- Indoor fan is turned on at low speed.

If Tr $\geqq$ 5ºC for 2 minutes
- MTV2 is OFF.
- AUX2 is open.
- DA3 is set to 0. If unit with 6-way valve, DA2 is 5 VDC.
- Electric Heater is turned off.
- Indoor fan is switched off.

D.14. Network setup

1) Disconnect the communication plug from the control box

2) Communication plug

A, B, A, B is printed on the main PCB. When you connect the wires, please ensure connection of A to A and B to B.

3) Connection wire

3.1) If the total length of wire is more than 1000 m, please use shielded wire in order to protect the signal transmission.

3.2) Complete wire connection
3.3) Wire connection check

3.3.1) After the wire connection is completed, please check that the wire colors correspond.

3.3.2) Check the wire contact by using a multimeter.

| 1st contact | 2nd contact | 4th contact | 6th contact |
| 3rd contact | 5th contact |
3.3.3) Check 1 and 2, 3 and 4, 5 and 6 to be sure connections are correct.

3.3.4) If the resistance between two wire contacts is too high, please check and reconnect the wire contacts.

4) Reconnect the communication plug to control box

5) Using wired wall pad or Modbus to set each unit address.

D.15. Open Modbus Protocol

Transfer Mode: RTU BAUD Rate: 9600bps, 8 data bit, 1 stop bit, none parity bit
The communications require a delay between reading an answer and sending the next command of 80 ms.
All temperature is equal to reading data*10 accuracy: 0.1 degree C.

Supported Functions

Function Code	Function description
01(01H)	Read Coils
02(02H)	Read Discrete Inputs
03(03H)	Read Holding Registers
04(04H)	Read Input Registers
05(05H)	Write Single Coil
06(06H)	Write Single Register
15(0FH)	Write Multiple Coils
16(10H)	Write Multiple Registers
255(FFH)	Extended Commands which are used to test.

Valid Error code table:

Error code	description	definition
01 (01H)	Invalid commands	Received commands beyond valid commands
02 (02H)	Invalid data address	Data addresses beyond valid data address
03 (03H)	Invalid data	Data beyond definition range
04 (04H)	Write data not succeed	Write data not succeed

Coils table:

D.16. LED Display and Error Description

Complete Function PCB – I Control Type		
Fan speed setting	LED indication	Condition
High speed	Red LED On	Normal
Medium speed	Yellow LED On	Normal
Low speed	Green LED On	Normal

For all units - Green LED			
Error Description	Blink	Reason	Remedy
Return air sensor failure	Green LED blinks 1 times, stops for 3s	Room sensor unplugged or damaged.	1. Check if Tr plug is connected or not. 2. Check if sensor's resistance is correct or not.
Indoor coil sensor 1 failure	Green LED blinks 2 times, stops for 3s	Ti1 sensor unplugged or damaged.	1. Check if Ti1 plug is connected or not. 2. Check if sensor's resistance is correct or not.
Indoor coil sensor 2 failure	Green LED blinks 3 times, stops for 3s	Ti2 sensor unplugged or damaged.	1. Check if Ti2 plug is connected or not. 2. Check if sensor's resistance is correct or not.
Water pump failure	Green LED blinks 4 times, stops for 3s	Float switch is opened.	1. Check if the condensate water pipe is connected or not. 2. Check if the pump is functioning or not.
Indoor coil low temperature protection	Green LED blinks 5 times, stops for 3s	Water temperature is lower than 3 ºC.	Check the water temperature.
Indoor coil overheat protection	Green LED blinks 6 times, stops for 3s	Water temperature is higher than 70 ºC.	Check the water temperature.
Filter Switch (S6 PCB)	Green LED blinks 7 times, stops for 3s	Filter switch is opened.	1. Check if filter block or not. 2. Replace the new filter.
Electric Heater failure	Green LED blinks 8 times, stops for 3s	Only for unit with EH. EH safety switch is opened.	1. Change fan speed to high. 2. Replace the damaged EH safety switch.
EC motor failure(CN4)	Green LED blinks 9 times, stops 3s	No EC motor feedback	1. Check Modbus setting. 2. Check the EC motor.
EC motor failure(CN5)	Green LED blinks 10 times, stops 3s	No EC motor feedback	1. Check Modbus setting. 2. Check the EC motor.
Anti-frozen protection	Green LED blinks 12 times, stops for 3s	When unit is standby, Tr<2ºC.	1. Turn on unit to keep Tr high than 5ºC.

PA24 PCSL-V-ECM-001

E. Control Specifications: Flexible Function (W Type)

E.1. Features

- Condensate management with valve protection and NC alarm contact.
- Integrated fan relays for zone control applications.
- ON/OFF thermostat input and low-voltage modulating fan speed input flexibility.
- Simple error diagnostic and LED error display.

E.2. I/O Port Definitions

I/O		Code	2-Pipe	4-Pipe
Analogue input	Coil temperature sensor	AI1	Cooling / heating coil sensor (Ti1)	Cooling only coil sensor (Ti1)
Voltage input	High fan speed	H	230 VAC input signals from wired thermostat	
	Medium fan speed	M		
	Low fan speed	L		
	EH signal	EH	230 VAC input signals from wired thermostat	
	Phase	L1	External 230VAC power supply connection to the PCB.	
	Neutral	N1, N2		
	Earth	GND		
Signal Input	Modulating signal	+/-	Low voltage modulating signal input (standard 0~5 VDC;.S1=OPEN, optional 0~10 VDC, S1=CLOSED)	
Digital input	Programming interface	TTL	Low voltage digital signal input for board programming	
	Float switch	Float	Voltage-free (NC)	
Voltage output	Water pump	PUMP	Voltage output (L)	
	EC motor	CN4	5-wire connection	
	Stepping motor	CN1-2	Low-voltage output	
	EH relay	CN5	When EH signal input is powered ON and EC motor RPM > 300 RPM, EH output is turned ON.	
Digital output	LED display	X-DIS	Low-voltage output.	
Voltage-free output	Alarm	ALARM	Voltage-free alarm contact: (a) Standard configuration is (NC).	

E.3. Onboard configuration

The PCB can be configured for different modulating signal inputs.
Refer to jumper configuration table below.

Code	State	Description
S1	Open	PCB configured for 0~5VDC modulating signal input.
S1	Closed	PCB configured for 0~10VDC modulating signal input.
S3	N/A	Reserved
S4	N/A	Reserved

E.4. Wiring Diagram

E.4.1. EC-W1B Type Control

EC-W1B Wiring Scheme

Legend:
ALARM: Pump failure, it's opened.
PUMP: Water pump output
CN1,CN2: Stepping motor
CN4: EC motor output

AI1: Indoor coil sensor(TI1)
AI2: 0~10VDC ,EC Motor control signal.
X-DIS: Led display
TTL: Wired wallpad, used to set motor rpm.

PA24 PCSL-V-ECM-001

E.5. Control Logic Specification

E.5.1. Unit Power ON/OFF

- The unit is turned ON when any of the fan speed inputs (H/M/L) are ON, or modulating signal input is more than 2.0 VDC.
- The unit is turned OFF only if all of the fan speed inputs (H/M/L) are OFF and modulating signal input is less than 2.0 VDC.

E.5.2. Alarm Protection and Error Display

- If the float switch is open for 5 minutes, then the (NC) voltage-free alarm contact shall be open and the (NO) voltage free alarm contact shall be closed.
- If the float switch is open for 10 minutes or EC motor fails, the LED display reports a condensate management failure (see table on the next page).

E.5.3. Drain Pump Operation

When the unit turns ON:

- If $Ti1 < 14ºC$, the drain pump turns ON.
- If $14ºC \leqq Ti1 < 16ºC$, the drain pan keeps original state.
- If $Ti1 \geq 16 ºC$, the drain pump turns OFF.

When the unit turns OFF and the drain pump is ON:

- The drain pump will remain ON for 5 minutes and then turn OFF.

At any time:

- If the float switch is OPEN, the drain pump will turn on.
- If the float switch is OPEN and then CLOSES, the drain pump will remain ON for 5 minutes, and then turn off.

E.5.4. Louver Control

- When the unit is OFF, the louvers are closed (angle at 100º).
- When the unit turns ON, the louvers open (angle at 87º).
- When the unit turns OFF, the louvers return to a closed position (angle at 100º).

E.5.5. Modulating Signal Input

- The standard configuration is for 0~5VDC modulating signal input.

- The optional configuration is for 0~10VDC modulating signal. To set the PCB to the optional configuration, the S1 jumper must be closed.

E.5.6. Electrical Heater Operation

- After unit is turned on, EH relay will be ON when EH signal is power on and EC motor RPM>300.
- If EC motor failure or EC motor RPM is lower than 300RPM, EH relay is opened at once.

E.5.7. Low Temperature Protection of Indoor Coil in Winter

This is frost protection for when the unit is off to prevent water in the coil and room from freezing.

Unit is in Standby Mode

If $Ti1 \leqq 2 ºC$ for 2 minutes, report error code and Buzzer is beeping for 3 minutes.
E.6. LED Display and Error Description
Flexible Control PCB - W Control Type		
Fan speed setting	LED Display	Condition
High speed	Red LED On	Normal
Medium speed	Yellow LED On	Normal
Low speed	Green LED On	Normal

For all units - Green LED blinks			
Item	Blink	Reason	Remedy
Indoor coil sensor 1 failure	Green LED blinks 4 times, stops for 3s	Ti1 sensor connection is damaged.	1. Check if Ti1 plug is connected or not. 2. Check sensor's resistor is good or not.
Water pump failure	Green LED blinks 7 times, stops for 3s	Float switch is opened.	1. Check if the condensate water pipe is connected or not. 2. Check if the pump is functioning or not.
EC motor failure	Green LED blinks 9 times, stops for 3s	No EC motor feedback	Check the EC motor.
Anti-frozen protection	Green LED blinks 11 times, stops for 3s	When unit is standby, Ti1<2ºC.	Turn on unit to keep Ti higher than 5ºC.

F. User Interface

F.1. Remote Handset

Adjust Set Temperature
Press down or up button to decrease or increase the desired room temperature.
Note: Temperature can not be set in Fan mode.

Mode
Press this button to advance the mode in the following sequence:
Cool→ Dry→ Fan→ Heat→Auto Cool-Heat
[Both Cool and Heat symbol light up]

Fan
Press this button to advance the fan speed as follows:
Auto→ Low→ Medium→ High

Under Fan mode, only low, medium and high are available.
Under Dry mode, fan speed will be inhibited and will not be displayed.

On Timer
First press shows the last timer setting. Subsequent pressing will change the timer setting in 1 minute intervals. Hold down the On button continuously to increase the updating speed.

Cancel Timer
Press this button to cancel all timer settings.

Sleep
Press to activate the energy saving Sleep function which automatically adjusts the temperature to provide a more comfortable sleep, ie for use in bedrooms.

On/Off
Press to switch on or off the air conditioner.

Louver
Press this button to change louver angle to a fixed position 1,2,3,4, auto sweep or stop.

Swing
It is not available.

Clock
Press down or up button for 2 seconds to activate. The current clock setting will decrease or increase at 1 minute intervals on each press.
The speed of interval updating increases after 4 seconds of continuous key press. It will update at high speed after 6 seconds of continuous key press.

Off Timer
First press shows the last timer setting. Subsequent pressing will change the timer setting in 1 minute intervals. Hold down the Off button continuously to increase the updating speed.

FAN   MODE
TIMER FUNCTION
ON CANCEL OFF
SLEEP LOUVER
SWING

Attention

When unit with handset is the master unit, its settings are automatically sent to the slave units; Auto Cool-Heat operation will be applicable in 4-pipe system only.

"Swing" function is not applicable.
European version only uses degree C setting.

PA24 PCSL-V-ECM-001

F.2. Wired Wall Pad Controller

S15	Ventilation Mode	S30	0-Auto. 1-Low. 2-Medium. 3-High	S43	Down

F.2.2. Operation guide

S38	On/OFF Button	Press ⏻ to turn on. Press it again to turn off.
S39	Mode button	With wall pad on, p**M** to select Cooling, Dehumidification, Heating, Ventilation or Auto sequentially.or Auto sequentially.
S40	Fan Speed Button	Press ✿ S30 to change from 0 to3. 0=Auto speed, 1=Low speed, 2=Medium speed, 3=High speed.
S41	Parameter Setting Button	Long press ⚙ for 5 seconds to set today's day of week. Press ∨ or ∧ to change from Monday to Sunday.
		Long press ⚙ for 5 seconds then short press it once to set current time. Press ∨ or ∧ to change current time.
		Long press ⚙ for 5 seconds then short press it twice to set Timer ON. Press **M** to set day of week from Monday to Sunday. Press ∨ or ∧ to change Timer ON time. Press ⏻ to turn Timer ON on or off and S8 appears or disappears.
		Long press ⚙ for 5 seconds then short press it 3 times to set Timer OFF time. Press **M** to set day of week from Monday to Sunday. Press ∨ or ∧ to change Timer OFF time. Press ⏻ to turn Timer OFF on or off and S10 appears or disappears.
		Long press ⚙ for 5 seconds then short press it 4 times to set group control and U31 appears. The function is reserved.
		Long press ⚙ for 5 seconds then short press it 5 times to set unit address and U32 appears. Press ∨ or ∧ to change unit address.
	*** For MODBUS user only	Long press ⚙ for 5 seconds then short press it 6 times to set unit parameters. Press **M** to change the parameter type. Press ∨ or ∧ to change parameter setting value.
		S31/S32 displays "U001", which is used to set unit type. 0=iAIR .... Mode: Ventilation T, RH, CO2, PM2.5 are displayed. 1=iFCU .... Mode: S12, S13, S14, S15, S16, S21 or S20 is displayed. 2=iAHU .... Mode: S12, S13, S14, S15, S16, S21 or S20 is displayed. 3=iAHU with air cleaner .... Mode: S12, S13, S14, S15, S16, T, RH, CO2, PM2.5 are displayed.
		S31/S32 displays "U002", which is used to set unit of temperature degree. 0=Celsius degree. 1=Fahrenheit degree.

PA24 PCSL-V-ECM-001

S31/S32 displays "U003", which is used to select display temperature on LCD.
   1=Setting temperature.
   0=Room temperature.

S31/S32 displays "U004", which is used to set setting temperature range.
   0=Setting temperature is from 16~30°C.
   1=Cooling setting temperature 24°C, Heating setting temperature 21°C.

S31/S32 displays "U005", which is used to set setting temperature band.
   1~9°C.

S31/S32 displays "U006-U009", which are reserved to set parameters with optional accessory to measure PM2.5 and CO2 values.

S31/S32 displays "U010~U011", which are reserved.

S31/S32 displays "U012", which is used to set setting RH point.
   30~70, default: 50

S31/S32 displays "U013", which is used to set setting RH band.
   10~30, default: 10

S31/S32 displays "U014", which is used to set unit address.
   1~255, default: 1

S31/S32 displays "U015",which is used to set unit ESP.
   0~100%, default: 40%，

S31/S32 displays "U016", which is reserved.

S31/S32 displays"U017", which is used to set software. (please refer to different PCB)
   0=2-pipe with valve
   1=2-pipe without valve
   2=4-pipe with std valve
   3=4-pipe with 6-way
   valve

S31/S32 displays "U018", which is reserved.

S31/S32 displays "U019", which is used to set DA1 function
When U001=2,3
U019=0, fan control signal is based on Tr, Ts PID calculation
U019=1, fan control signal is based on ESP PID calculation

S31/S32 displays "U020", which is used to calibrate the sensor on the wired wall pad.
-5~5, default: -3

S31/S32 displays "U021", which is used to set EH function
U021= 0, without EH.
U021= 1, EH as booster.
U021=2, EH as primary.

S31/S32 displays "U022", which is used to select Tr sensor.
0=the sensor in the WWP.
1=the sensor in the PCB.

S31/S32 displays "U023", which is used to display cooling and heating energy consumption.
0=S34/S35/S36/S37 disappears
1=S34/S35/S36/S37   appears
In cooling and dehumidification mode, cooling energy consumption is shown.
In heating mode, heating energy consumption is shown.

PA24 PCSL-V-ECM-001

		2=Motor running time is shown. S31/S32 displays "U024", which is used to set low speed RPM or control signal. S31/S32 displays "U025", which is used to set medium speed RPM or control signal. S31/S32 displays "U026", which is used to set high speed RPM or control signal. S31/S32 displays "U027", which is used to set Delta T OF Ti1/Ti2. S31/S32 displays "U028", which is used to set Delta T OF Ti3/Ti4. S31/S32 displays "U029", which is used to read unit type. S31/S32 displays "U030", which is used to read unit model. S31/S32 displays "U031", which is used to read unit manufacturing date.
S32	Error code	S32：E** blinks Bit0 = Room temperature sensor error Bit1 = Ti1 temperature sensor error Bit2 = Ti2 temperature sensor error Bit3 = Float switch error Bit4 = Indoor coil low temperature protection Bit5 = Indoor coil overheat protection Bit6 =Filter switch Bit7 = Electrical heater failure Bit8 = Motor1 Error Bit9 =Motor2 Error Bit10 = System parameters error Bit11 = Anti-frozen error Bit12 = Ti3 temperature sensor error Bit13 = Ti4 temperature sensor error Bit14 =PM2.5 sensor Bit15 =AQI Error
Combination Button Function		**Screen Lock Function** Long press ∧ for 5 seconds, S19 appears and screen is locked. Long press ∧ for 5 seconds again, S19 disappears and screen is unlocked.
		Swings Function Long press ∨ for 5 seconds, S18 appears and swings is ON. Long press ∨ for 5 seconds again, S18 disappears and swings is OFF.
		Sleep Mode Long press ✿ for 5 seconds, S17 appears and sleep mode is ON. Long press ✿ for 5 seconds again, S17 disappears and sleep mode is OFF.

F.2.3. Error Code List

Error Description	Code	Reason	Remedy
Room temperature sensor error	E1	Room sensor unplugged or damaged.	1. Check if Tr plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Indoor coil sensor 1 failure	E2	Ti1 sensor unplugged or damaged.	1. Check if Ti1 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Indoor coil sensor 2 failure	E3	Ti2 sensor unplugged or damaged.	1. Check if Ti2 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Float switch error	E4	Float switch is opened.	1. Check if the condensate water pipe is connected or not.
			2. Check if the pump is functioning or not.
Indoor coil low temperature protection	E5	Water temperature is lower than 3 ºC.	Check the water temperature.
Indoor coil overheat protection	E6	Water temperature is higher than 70 ºC.	Check the water temperature
Filter switch protection	E7	Filter Switch is open.	Replace or clean filter.
Electric Heater failure	E8	Only for unit with EH.	1. Change fan speed to high.
		EH safety switch is opened.	2. Replace the damaged EH safety switch.
EC motor failure(CN4)	E9	No EC motor feedback	1. Check Modbus setting.
			2. Check the EC motor.
EC motor failure(CN5)	E10	No EC motor feedback	1. Check Modbus setting.
			2. Check the EC motor.
Motor quantity setting error (S6 PCB)	E11	Motor quantity setting error	1: check Modbus setting
Anti-frozen protection	E12	When unit is standby, Tr<2ºC.	1. Turn on unit to keep Tr high than 5ºC
Indoor coil sensor 3 failure (S6 PCB)	E13	Ti3 sensor unplugged or damaged.	1. Check if Ti3 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Indoor coil sensor 4 failure (S6 PCB)	E14	Ti4 sensor unplugged or damaged.	1. Check if Ti4 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
PM2.5 sensor failure (S6 PCB)	E15	PM2.5 sensor unplugged or damaged.	1. Check if PM2.5 plug is connected or not.
			2. Check if sensor's resistance is correct or not.
AQI sensor failure (S6 PCB)	E16	AQI sensor unplugged or damaged.	1. Check if AQI plug is connected or not.
			2. Check if sensor's resistance is correct or not.
Wired Wall Pad failure	E17	WWP unplugged or not well	1. Check plugs

F.2.4. Dimensions and installation

Use screwdriver to remove the screw on the bottom

PA24 PCSL-V-ECM-001
G. Sensor Resistance R-T Conversion Table

Resistance: R (25°C) = 10KΩ ± 1%   Beta Constant: B (25/85) = 3950 ± 1%

H. Troubleshooting

Symptoms	Cause	Remedy
The fan coil does not start up	No voltage	Check for presence of voltage Check fuse on board
	Mains switch in the "OFF position	Place in the "ON" position
	Faulty room control	Check the room control
	Faulty fan	Check fan motor
Insufficient output	Filter clogged	Clean the filter
	Air flow obstructed	Remove obstacles
	Room control regulation	Check the room air sensor
	Incorrect water temperature	Check the water source
	Air present	Check the air vent
Noise and vibrations	Contact between metal parts	Check for loosening parts
	Loose screws	Tighten screws
